Preface

Electricity is a key component of the fabric of modern society and the Electric Reliability Organization (ERO) Enterprise serves to strengthen that fabric. The vision for the ERO Enterprise, which is comprised of NERC and the six Regional Entities, is a highly reliable, resilient, and secure North American bulk power system (BPS). Our mission is to assure the effective and efficient reduction of risks to the reliability and security of the grid.

Reliability | Resilience | Security
Because nearly 400 million citizens in North America are counting on us

The North American BPS is made up of six Regional Entity boundaries as shown in the map and corresponding table below. The multicolored area denotes overlap as some load-serving entities participate in one Regional Entity while associated Transmission Owners/Operators participate in another.

MRO	Midwest Reliability Organization
NPCC	Northeast Power Coordinating Council
RF	ReliabilityFirst
SERC	SERC Reliability Corporation
Texas RE	Texas Reliability Entity
WECC	WECC

Introduction

This document will demonstrate one method for acquiring the necessary data for a given location and a method of performing the statistical analysis of the data to determine the Extreme Cold Weather Temperature for a given location. This example is focused on United States and will use data obtained from NOAA's Climate Data Online database and perform the statistical analysis with Microsoft Excel. The method shown in this document only shows the collection of data from a single source and two methods of analyzing this data, both using Microsoft Excel.

Determination of Location's Extreme Cold Weather Temperature

Gathering the Data

Navigate to <https://www.ncdc.noaa.gov/cdo-web/>

1. Select **Data Tools**.

The screenshot shows the NOAA Climate Data Online (CDO) website. At the top, there are logos for NOAA and the Department of Commerce, United States of America. Below the logos is a navigation bar with links for Home, Climate Information, Data Access, Contact, and About, along with a search box. A secondary navigation bar contains links for Datasets, Search Tool, Mapping Tool, Data Tools, and Help. The main content area features a large heading "Climate Data Online" and a descriptive paragraph. Below this are four service tiles: "Browse Datasets", "Certify Orders", "Check Status", and "Find Help". At the bottom, there is a "DISCOVER DATA BY" section with three colored boxes: "SEARCH TOOL" (blue), "MAPPING TOOL" (orange), and "DATA TOOLS" (red, highlighted with a red border). The "DATA TOOLS" box contains the text "Access past weather and climate data using a collection of specialized tools." and a link "Data Tools »".

Climate Data Online

Climate Data Online (CDO) provides free access to NCDC's archive of global historical weather and climate data in addition to station history information. These data include quality controlled daily, monthly, seasonal, and yearly measurements of temperature, precipitation, wind, and degree days as well as radar data and 30-year Climate Normals. Customers can also order most of these data as [certified hard copies](#) for legal use.

- Browse Datasets**
Browse documentation, samples, and links
- Certify Orders**
Get orders certified for legal use (requires payment)
- Check Status**
Check the status of an order that has been placed
- Find Help**
Find answers to questions about data and ordering

DISCOVER DATA BY

- SEARCH TOOL**
Search for and access past weather and climate data by station name or identifier, ZIP code, city, county, state, or country.
[Search Tool »](#)
- MAPPING TOOL**
Find and view past weather and climate data by station name or identifier, ZIP code, city, county, state, or country.
[Mapping Tool »](#)
- DATA TOOLS**
Access past weather and climate data using a collection of specialized tools.
[Data Tools »](#)

2. Scroll down if necessary and select **Local Climatological Data (LCD)**.

Find a Station

Locate weather observing stations using a variety of parameters such as address, ZIP code, date, and data type with filters by observation type

Select a Location

Order data by weather observing stations or by geographic locations using a simplified drill-down interface with data from U.S. and other countries

Search Within a Single Dataset

The following search tools access data from within a specific dataset. Use these tools to view or order data from within each respective dataset. Data will be in a more standard format across stations or locations.

Climate Normals

View temperature and precipitation Climate Normals for over 9,800 stations across the United States and a selection of other territories

Daily Weather Records

Access summaries of recent global and U.S. daily weather records with options to view monthly, annual, all-time or selected records

Local Climatological Data (LCD)

View and order hourly, daily, and monthly data from nearly 2400 locations within the U.S., surrounding territories, and other selected areas

Marine Data

View and order historical marine data which is comprised of ship, buoy, and platform observations from 1662 to present.

- 3. Use the selection tool to find a weather station appropriate for your location and click ADD TO CART.

Map Tool

NOAA will not share your email address with anyone. The email address will not be used for any purpose other than communicating the order status.

7. Click **Download** in the email that you will receive from NOAA to download your dataset.

Analyzing the Data

Option 1

1. Open the .csv file that was downloaded using the previous steps (and combine with other .csv files as necessary to cover the required date range).
2. Add filters to the first row and filter on "Report Type", column C, to only show report type FM-15, this is the standard METAR data.

STATION	DATE	REPOR	SOURC	AWND	Backup	Backup	Backup	Backup	Backup	Backup	Backup	Backup	Backup

2012-11-01T00:52:00	53		

4. Using the data on the "Clean and Filter" sheet, type **Month** in column C1, type the formula "mid(A2,6,2)" in cell C2, and copy that formula in column C to the last row of the data set. Then Filter month to only show months 1, 2, 12 (January, February, and December).
5. You can then filter by HourlyDryBulbTemperature (Column B) to find and address bad data as appropriate. Now Select, Copy, and Paste the remaining data to a new sheet named ECWT.

776	2012-12-02T05:52:00		43 12	

- Using Excel's built in Percentile function, the Extreme Cold Weather Temperature (ECWT) can now be determined. While on the ECWT sheet, in a blank cell use the function "=PERCENTILE.INC()" and select all temperature data in Column B (HourlyDryBulbTemperature) on the "ECWT" sheet and use 0.002 for the percentile value. The formula will look similar to this, "=PERCENTILE.INC(B:B,0.002)" (using 0.002 for the second argument in this function returns the two-tenths percentile temperature of the hourly temperatures measured in the dataset used).

This value should be representative of the Extreme Cold Weather Temperature based on the given dataset.

E5		=PERCENTILE.INC(B:B,0.002)

20	2012-12-01T18:52:00		64 12				

Option 2

These next few steps demonstrate how to view the distribution of temperatures from the data set and obtain the Extreme Cold Weather Temperature by a slightly different method.

1. On the "Clean and Filter" sheet, insert two new columns between column A and column B. Select column A and use Excel's *Text to Columns* feature and selected the delimited option and use the letter "T" to split the date data into a date component and a time component by hitting "Next" and "Finish".

	A	B	C	D	E	F	G
1	DATE	Time		HourlyDryBulbTemperatur			
2	2012-10-31T00:52:00			52

- Type Month in cell E1, and in cell E2 use the formula “=month(C2)”. Copy the formula for all rows of the data set, then filter based on month, only selecting 1,2,12 for the desired months. Then copy remaining data from column C and column D to a sheet named Histogram.

E747 X ✓ fx =MONTH(C747)

- On the Histogram sheet, enter “=min(B:B)” in cell C1, and “=max(B:B)” in cell C2. This will give you the minimum and maximum temperatures in the dataset. We will use the temperatures to set range for this histogram. In Column D start with a value, a few degrees below the min, then list every degree to a few degrees above the max.

6. The output from this will provide a listing of percentile rankings for the listed temperatures, as well as a graph output of the distribution of temperatures contained in this dataset. The “Bin” column shows the temperature, “Frequency” shows how many times that temperature occurred within the dataset, and “Cumulative %” shows the percentile ranking for each temperature. Choose the temperature at or closest to the 0.2 percentile level.
