

**ICTE TLR 5 Investigation Report
Flowgate 1388
(Mt. Olive - Hartburg for the loss of Webre - Wells 500 kV)
TLR Level 5: September 25, 2010
Report Issued:**

1. Description of purpose/cause of hold/curtailment.

This report is submitted in accordance with the NERC Transmission Loading Relief Investigation Procedure for the TLR 5 event that occurred on Flowgate 1388 on September 25, 2010. Flowgate 1388 is an Entergy flowgate. The TLR 5 was in effect from 11:35 AM on September 25, 2010 until 11:32 AM on September 27, 2010. Projected post-contingent flows on the Mt. Olive - Hartburg line for the loss of the Webre - Wells 500 kV line exceeded the SOL.

2. Facility/flowgate limitations and flows at the time the TLR was initiated.

At the time the TLR 5a was issued, the Limiting Element was rated at 1050 MVA. Flow on the Limiting Element was 719 MVA. Flow on the Contingent Element was 753 MVA. The LODF was approximately 41%. Post-contingent flow on the Limiting Element was approximately 1028 MVA. During the TLR, a TLR 5b was issued.

3. TLR levels, timing, and relief requested amounts.

TLRs levels, timing and relief requested amounts are shown on pages 2 -7.

4. Transmission and generation outages or changes from prediction that may have contributed.

Nelson 6 was offline in an unplanned outage.

5. Procedures implemented prior to hold/curtailment.

Curtailed non-firm transactions, not enough non-firm to alleviate the flowgate.

6. The initial investigation shall compare all transaction curtailment lists as generated by the IDC with the list of transactions flowing as determined by the IDC (Whole Transaction Lists) both before and after curtailment. The reasons for any transactions that were excluded from curtailment shall be provided. For those transactions not curtailed, the Reliability Authority will identify those entities and any affiliation with said entities.

There were no known transactions excluded from curtailment for this TLR.

7. List of known transactions not in the IDC with Transaction Contribution Factors greater than the curtailment threshold and actions taken to curtail such transactions.

There were no known transactions not in the IDC.

8. Excerpts from the RA Operations Log containing information relevant to the TLR event.

Information was provided to Reliability Coordinators through the IDC and the RCIS. Also the ICTE Reliability Coordinators logged information describing the actions taken at each issuance of the TLR.

9. Flowgate limitations as identified by security analysis processes conducted by the Reliability Authority for the day prior to the TLR event.

In the next day process, we did not see an issue with this flowgate, based off of the peak study.

10. State Estimator snapshots and security analysis, including any contingency analysis or stability analysis, along with any other recorded data indicating need for TLR.

The ICTE Reliability Coordinator was monitoring their state estimator for potential issues during this time. Screen shots were taken during each issuance of the TLR level 5.

11. ATC limitations before, during, and after the TLR event.

ICT Tariff Administration grants transmission service using an AFC process. This process evaluates each transmission request on a case by case basis. There are no ATC values for individual corridors to or from the Entergy system. ICT Tariff Administration was not granting any transmission requests that impacted the congested flowgate by 3 % or greater at the time of the TLR 5.

12. Description of actions taken to avoid future hold/curtailments.

This TLR was caused by a combination of generation patterns, load, and system flows. Due to this situation, no actions were taken to avoid future hold/curtailments.

13. Provide IDC generated Congestion Management Reports showing transaction curtailment list and Control Area NNL (network and native load) curtailment responsibility.

Congestion Management Reports for each issuance of the TLR have been reviewed and kept on file. These screen shots are not being provided to reduce the size of this report

14. Re-dispatch actions taken.

Entergy achieved their NNL obligation by moving Wotab generation.

Asked him if he was okay with waiting till the top of the hour (21:00) before deciding to ask for NNL relief due to the fact that PUPP generation would be decreasing by 500mws at that time and would have a direct impact on the monitored element on this FG. I told him that if the situation got worse or did not resolve itself at the top of the hour, then we could go to a TLR 5B and get things under control with 15-20 minutes. He said that he was okay with doing that.	TLR - 5a Reissue
