Project 2009-01: Disturbance and Sabotage Reporting

The Disturbance and Sabotage Reporting Drafting Team is seeking comments on a proposed concepts paper for disturbance and sabotage reporting **until 8 p.m. Eastern on April 16, 2010.**

The concepts paper lays out the foundation for the reporting requirements in the standard and was developed to solicit stakeholder input regarding the drafting team's proposed reporting concepts.

Instructions

Please use this [electronic form](#) to submit comments. If you experience any difficulties in using the electronic form, please contact Lauren Koller at Lauren.Koller@nerc.net. An off-line, unofficial copy of the comment form is posted on the project page: http://www.nerc.com/filez/standards/Project2009-01_Disturbance_Sabotage_Reporting.html

Next Steps

The drafting team will draft and post responses to comments received during this period.

Project Background

This project will entail revising existing standards CIP-001-1 — Sabotage Reporting and EOP-004-1 — Disturbance Reporting to eliminate redundancies and provide clarity on sabotage events. The project will address several issues identified by stakeholders, as well as FERC directives from Order 693. The other changes may include improvements to the standards deemed appropriate by the drafting team, with the consensus of stakeholders, consistent with establishing high quality, enforceable and technically sufficient bulk power system reliability standards.

Standards Development Process

The [Reliability Standards Development Procedure](#) contains all the procedures governing the standards development process. The success of the NERC standards development process depends on stakeholder participation. We extend our thanks to all those who participate.
