Standards Announcement

Re-ballot Window Open

March 10–31, 2010

Now available at: <https://standards.nerc.net/CurrentBallots.aspx>

Project 2009-32: Interpretation of EOP-003-1, Requirements R3 and R5, for the Florida Municipal Power Pool (FMPP)

The initial ballot for an interpretation of standard of EOP-003-1 — Load Shedding Plans, Requirements R3 and R5, for FMPP conducted from February 26–March 8, 2010 did not reach quorum; therefore, the ballot results are void.

A re-ballot window is now open **until 8 p.m. Eastern on March 31, 2010**. Members of the ballot pool for the initial ballot will be transferred to the ballot pool for this re-ballot; voters may not join or remove themselves from the pool. Results from the re-ballot will replace the initial ballot results.

Instructions

Because the initial ballot results are void, **all previous votes have been removed**. Members of the ballot pool associated with this project may log in and submit their votes from the following page:

<https://standards.nerc.net/CurrentBallots.aspx>

Next Steps

Voting results will be posted and announced after the ballot window closes.

Project Background

FMPP is seeking clarification as to whether Requirements R3 and R5 apply only to automatic load shedding or to both automatic and manual load shedding.

The request and interpretation can be found on the project page:

http://www.nerc.com/filez/standards/Project2009-32_EOP-003-1_R3_R5_FMPP.html

Standards Development Process

The [Reliability Standards Development Procedure](#) contains all the procedures governing the standards development process. The success of the NERC standards development process depends on stakeholder participation. We extend our thanks to all those who participate.
