Re-ballot Results for Interpretation of EOP-002-2 (Project 2008-07)

The re-ballot results for the revised interpretation of EOP-002-2 — Capacity and Energy Emergencies, Requirements R6.3 and R7.1 (requested by Brookfield Power) are shown below:

Quorum: 82.61 %

Approval: 74.67 %

Approval requires both:

- A quorum, which is established by at least 75% of the members of the ballot pool for submitting either an affirmative vote, a negative vote, or an abstention; and
- A two-thirds majority of the weighted segment votes cast must be affirmative. The number of votes cast is the sum of affirmative and negative votes, excluding abstentions and nonresponses.

The [Ballot Results](#) Web page provides a link to the detailed results of this ballot. The ballot received some negative votes with comments, and the drafting team will review the comments before determining its next step.

Standards Development Process

The [Reliability Standards Development Procedure](#) contains all the procedures governing the standards development process. The success of the NERC standards development process depends on stakeholder participation. We extend our thanks to all those who participate.
