2014 CIP Version 5 Revisions Calendar (as of April 25, 2014)

The Project 2014-02 CIP Version 5 Revisions Standard Drafting Team (SDT) began development in February of 2014 by constructing four subgroups to address the four main directives from FERC Order 791: (1) modify or remove the Identify, Assess, and Correct (IAC) language in 17 CIP requirements; (2) develop modifications to the CIP standards to address security controls for Low Impact assets (LIA); (3) develop requirements that protect transient electronic devices (TD); and (4) create a definition of "communication networks" and develop new or modified Reliability Standards that address the protection of communication networks (CN). As the SDT is approaching its goal to post the Reliability Standards, Implementation Plan, Violation Risk Factors (VRFs), and Violation Severity Levels (VSLs), the calls will be full SDT calls to focus on certain areas as designated below.

May

S	M	T	W	T	F	S
