

Standards Authorization Request Form

When completed, please email this form to: sarcomm@nerc.com

NERC welcomes suggestions to improve the reliability of the bulk power system through improved reliability standards. Please use this form to submit your request to propose a new or a revision to a NERC's Reliability Standard.

	Request to	propose a new or	a revision	to a Reliability Standard
Title of Propose	d Standard:	Demand and Energy	y Data	
Date Submitted	: /	July 18, 2013- April	1, 2015	
SAR Requester	Information			
Name:	Darrel Richa	rdson		
Organization:	NERC			
Telephone:	609-613-184	8	E-mail:	darrel.richardson@nerc.net
SAR Type (Chec	k as many as a	applicable)		
New Standard		🛛 Wit	hdrawal of existing Standard	
Revision to existing Standard		Urg	ent Action	

SAR Information

Industry Need (What is the industry problem this request is trying to solve?):

Resolve FERC directives from FERC Order 693 and Order 804, incorporate lessons learned, update standards, and to incorporate initiatives such as results-based, performance-based, Paragraph 81, etc.

Purpose or Goal (How does this request propose to address the problem described above?):

This is a continuation of Project 2010-04 MOD C. The revised SAR language is shown in red to ensure clarity as to the purpose of this phase of the project. The pro forma standard consolidates the reliability

RELIABILITY | ACCOUNTABILITY

components of the existing standards. This phase of the project proposes to revise MOD-031-1 to resolve the two directives from FERC Order 804.

Identify the Objectives of the proposed standard's requirements (What specific reliability deliverables are required to achieve the goal?):

The objectives are to address the outstanding directives from FERC Order 693 and Order 804, remove ambiguity from the requirements, and incorporate lessons learned.

Brief Description (Provide a paragraph that describes the scope of this standard action.)

An informal development ad hoc group is presenting a pro forma standard that consolidates the existing MOD-016-1.1, MOD-017-0.1, MOD-018-0, MOD-019-0.1 and MOD-021-1 into a single standard. The collection of demand projections requires coordination and collaboration between Planning Authorities (also referred to as "Planning Coordinators"), Transmission and Resource Planners, and Load-Serving Entities. Ensuring that planners and operators have access to complete and accurate load forecasts – as well as the supporting methods and assumptions used to develop these forecasts – will enhance the reliability of the BPS. Collection of actual demand and demand-side management performance during the prior year will allow for comparison to prior forecasts and further contribute to enhanced accuracy of load forecasting practices.

The pro forma standard requirements are currently placed within a new standard, MOD-031-1. This phase of the project proposes to resolve the two directives from FERC Order No. 804 to clarify (1) the obligations of the Planning Coordinator and Balancing Authority to provide data to their Regional Entity, and (2) the compliance obligations associated with requests for confidential information.

Detailed Description (Provide a description of the proposed project with sufficient details for the standard drafting team to execute the SAR. Also provide a justification for the development or revision of the standard, including an assessment of the reliability and market interface impacts of implementing or not implementing the standard action.)

Detailed description of this project can be found in the Technical White Paper of this SAR submittal package. This phase of the project will modify the language in Requirement R3 to clarify certain obligations to provide data to the Regional Entity and will also address the Order 804 directive to consider the compliance obligations of an applicable entity upon receipt of a data request that seeks confidential information.

.

	Reliability Functions			
The S	The Standard will Apply to the Following Functions (Check each one that applies.)			
	Regional Reliability Organization	Conducts the regional activities related to planning and operations, and coordinates activities of Responsible Entities to secure the reliability of the Bulk Electric System within the region and adjacent regions.		
	Reliability Coordinator	Responsible for the real-time operating reliability of its Reliability Coordinator Area in coordination with its neighboring Reliability Coordinator's wide area view.		
	Balancing Authority	Integrates resource plans ahead of time, and maintains load- interchange-resource balance within a Balancing Authority Area and supports Interconnection frequency in real time.		
	Interchange Authority	Ensures communication of interchange transactions for reliability evaluation purposes and coordinates implementation of valid and balanced interchange schedules between Balancing Authority Areas.		
	Planning Coordinator	Assesses the longer-term reliability of its Planning Coordinator Area.		
\square	Resource Planner	Develops a >one year plan for the resource adequacy of its specific loads within a Planning Coordinator area.		
	Transmission Planner	Develops a >one year plan for the reliability of the interconnected Bulk Electric System within its portion of the Planning Coordinator area.		
	Transmission Service Provider	Administers the transmission tariff and provides transmission services under applicable transmission service agreements (e.g., the pro forma tariff).		
	Transmission Owner	Owns and maintains transmission facilities.		
	Transmission Operator	Ensures the real-time operating reliability of the transmission assets within a Transmission Operator Area.		
	Distribution Provider	Delivers electrical energy to the End-use customer.		
	Generator Owner	Owns and maintains generation facilities.		
	Generator Operator	Operates generation unit(s) to provide real and reactive power.		

Reliability Functions		
Purchasing-Selling Entity	Purchases or sells energy, capacity, and necessary reliability-related services as required.	
Market Operator	Interface point for reliability functions with commercial functions.	
Load-Serving Entity	Secures energy and transmission service (and reliability-related services) to serve the End-use Customer.	

	Reliability and Market Interface Principles		
Appl	Applicable Reliability Principles (Check all that apply).		
\square	1. Interconnected bulk power systems shall be planned and operated in a coordinato to perform reliably under normal and abnormal conditions as defined in the NER		
\square	2. The frequency and voltage of interconnected bulk power systems shall be contro defined limits through the balancing of real and reactive power supply and dema		
	3. Information necessary for the planning and operation of interconnected bulk por shall be made available to those entities responsible for planning and operating reliably.	-	
	4. Plans for emergency operation and system restoration of interconnected bulk po shall be developed, coordinated, maintained and implemented.	ower systems	
	5. Facilities for communication, monitoring and control shall be provided, used and maintained for the reliability of interconnected bulk power systems.		
	6. Personnel responsible for planning and operating interconnected bulk power systems shall be trained, qualified, and have the responsibility and authority to implement actions.		
	7. The security of the interconnected bulk power systems shall be assessed, monitored and maintained on a wide area basis.		
	8. Bulk power systems shall be protected from malicious physical or cyber attacks.		
	Does the proposed Standard comply with all of the following Market InterfaceEnterPrinciples?(yes/n		
1	1. A reliability standard shall not give any market participant an unfair competitive advantage. Yes		
2	2. A reliability standard shall neither mandate nor prohibit any specific market Yes structure.		
3	A reliability standard shall not preclude market solutions to achieving compliance with that standard.	Yes
