

## Industry Webinar

Project 2015-10 Single Points of Failure

September 20, 2017

- Presenters
  - Standard Drafting Team
    - o Chair, Jonathan Hayes, SPP
    - Vice Chair, Delyn Kilpack, LGE-KU
    - Member, Chris Colson, WAPA
  - NERC Staff
    - Latrice Harkness
- Administrative Items
- Background
- Proposed Revisions
- Implementation Plan
- Next Steps
- Questions and Answers

## **Administrative Items**

 It is NERC's policy and practice to obey the antitrust laws and to avoid all conduct that unreasonably restrains competition. This policy requires the avoidance of any conduct that violates, or that might appear to violate, the antitrust laws. Among other things, the antitrust laws forbid any agreement between or among competitors regarding prices, availability of service, product design, terms of sale, division of markets, allocation of customers or any other activity that unreasonably restrains competition. It is the responsibility of every NERC participant and employee who may in any way affect NERC's compliance with the antitrust laws to carry out this commitment.

## NERC NORTH AMERICAN ELECTRIC RELIABILITY CORPORATION

#### **NERC Public Disclaimer**

#### Public Announcement

Participants are reminded that this meeting is public. Notice of the meeting was widely distributed. Participants should keep in mind that the audience may include members of the press and representatives of various governmental authorities, in addition to the expected participation by industry stakeholders.

#### Presentation Material

 Information used herein is used for presentation purposes and may not reflect the actual work of the official posted materials

#### For the official record

- This presentation is not a part of the official project record
- Comments must be submitted during the formal posting

## **Standard Drafting Team (SDT)**

Name	Organization/ Company
Jonathan Hayes (Chair)	Southwest Power Pool
Delyn Kilpack (Vice Chair)	Louisville Gas & Electric and Kentucky Utilities
Chris Colson	Western Area Power Administration
Bill Harm	PJM
Baj Agrawal	Arizona Public Service Company
Liqin Jiang	Duke Energy
Rich Kowalski	ISO New England
Prabhu Gnanam	ERCOT
Manuela Dobrescu Dobritoiu	Hydro-Quebec
Ruth Kloecker	ITC Holdings
Latrice Harkness	North American Reliability Corporation
Lauren Perotti, Counsel	North American Reliability Corporation

- Addresses reliability issues concerning the study of single points of failure on Protection Systems from FERC Order No. 754
- Addresses directives from FERC Order No. 786
- Replaces references to the MOD-010 and MOD-012 standards with the MOD-032 Reliability Standard
- The threat to BES reliability from single point-of-failure (SPF) of a Protection System component established well before this draft standard

### Project 2015-010 Single Points of Failure

- March 30, 2009: NERC issued a advisory report notifying the industry that a single point of failure issue had caused three significant system disturbances in five years.
- October 24-25, 2011: FERC technical conference titled Staff meeting on Single Points of Failure on Protection Systems concerning Commission's Order No. 754.
- December 6-8, 2011: NERC System Protection and Control Subcommittee (SPSC) agreed to sponsor a Request for Interpretation (RFI) which was accepted on February 3, 2012.
- September 2015 Report of Analysis on NERC Section 1600 Request for Data made a recommendation that TPL-001-4 Table 1 P5 event be revised to include protection system failure instead of a relay failure.

# **Proposed Revisions**

## **Summary of Revisions**

- Project 2015-010 Single Points of Failure
  - Requirement R1 Updated for MOD-032-1 standard.
  - Requirement R1 Modified how known outages are selected for study.
  - Requirement R2 Modified the P1 contingency events simulated (steady state) for known outages.
  - Requirement R2 Added model conditions for stability analysis of P1 events for known outages.
  - Requirement R2 Added stability analysis requirement for long lead time equipment unavailability.
  - Requirement R4 Added documentation requirement if Cascading observed given 3-phase fault SPF.

### **Summary of Revisions**

- Project 2015-010 Single Points of Failure
  - Table 1 Modified Category P5 event to include SPF.
  - Table 1 Modified Extreme Events, Stability column to differentiate SPF from stuck breaker.
  - Table 1 Modified Footnote 13 to specify SPF.
  - Implementation Plan (R1 & R2 36-months; R4 60-months).

### **Known Outages**

- Key Concepts Addressing FERC Order No. 786
  - Planned outages are not "hypothetical outages" and should not be treated as multiple contingencies in the planning standard (should be addressed in N-0 base case) (P 42);
  - Relying on Category P3 and P6 is not sufficient and does not cover maintenance outages (P 44);
  - Near-Term Transmission Planning Horizon requires annual assessments using Year One or year two, and year five, and known planned facility outages of less than six months should be addressed so long as their planned start times and durations may be anticipated as occurring for some period of time during the planning time horizon (P 45).

## **Known Outages**

- Proposed Change to Requirement R1, Part 1.1.2 Study of Known Outages
  - TPL-001-4 only requires study of outages lasting longer than six months.
  - FERC Order No. 786 directed NERC to address outages that may be excluded.
    - Revised Requirement R2, Part 2.1.3 will reference Requirement R1, Part 1.1.2 (steady state Near-Term).
    - New Requirement R2, Part 2.4.3 will reference Requirement R1, Part 1.1.2 (stability Near-Term).
  - Proposed coordination with Reliability Coordinator.
    - Pursuant to IRO-017 (Outage Coordination).
    - "as selected in consultation with the RC for the Near Term Planning Horizon".

- Don't confuse duration of outage with when outage is planned
  - Duration can be of any length of time.
  - Outage must still fall within the Near-Term Planning Horizon ("The transmission planning period that covers Year One through five.").

## **Spare Equipment**

- Proposed Change to Spare Equipment
  - TPL-001-4 Requirement R2, Part 2.1.4 requires steady state study of removed long lead equipment from model if long lead equipment does not have a spare (example transformers).
  - Proposed addition of Requirement R2, Part 2.4.5 requires stability study be performed for long lead equipment that does not have a spare.
    - Only have to study P1 and P2 events .

- Proposed Change to P5 and Extreme Event
  - Existing TPL-001-4 Table 1 P5 and extreme event (3-phase fault) refers to a fault and a failure of a non-redundant <u>relay</u>.
  - The proposal changes event to a fault and a failure of a non-redundant component of a Protection System.
  - For extreme event (Stability column), breaker failure and failure of a non-redundant component of a Protection System are differentiated.
    - Recognizes that sequence of Protection System action leading to Delayed
       Clearing may be quite different between two causalities.

#### Footnote 13

- Expands Protection System components to be considered:
  - A single protective relay which responds to electrical quantities, without an alternative that provides comparable Normal Clearing times, e.g. sudden pressure relaying;
  - A single communications system, necessary for correct operation of a communication-aided protection scheme required for Normal Clearing, which is not monitored or not reported;
  - A single dc supply associated with protective functions, and that single station dc supply is not monitored or not reported for both low voltage and open circuit;
  - A single control circuitry associated with protective functions including the trip coil(s) of the circuit breakers or other interrupting devices.
- Proposed TPL-001-5 clarifies subset of components of Protection System relevant to assessing Delayed Clearing.
  - PTs and CTs are excluded; single failed device unlikely to prevent tripping.
  - All other components addressed.

# **Implementation Plan**

## NERC NORTH AMERICAN ELECTRIC RELIABILITY CORPORATION

### **Implementation Plan**

- The SDT recognizes the need to have a phased-in approach to be able to study and develop a CAP for the failure of a "Component of a Protection System"
- In summary:
  - R1 and R2 enforceable in 36-months after FERC approval (and alignment time).
  - R4 enforceable in 60-months after FERC approval (and alignment time).
  - CAPs addressing P5 changes enforceable in 60-months after FERC approval.
  - Planning Assessments addressing all provisions of TPL-001-5 required by 36-months after FERC approval.

#### Comment period

- Project 2015-10 page
- 45-Days September 8 October 23, 2017
- Initial Ballot October 13 23, 2017
- Respond to Comments
  - November 28 30, 2017
- Point of contact
  - Latrice Harkness, Senior Standard Developer
  - <u>Latrice.Harkness@nerc.net</u> or call 404-446-9689
- Webinar posting
  - 48-72 hours
  - Standards Bulletin

# **Questions and Answers**

### **Q & A Objectives**

#### Informal discussion

- Via the Q&A feature
- Chat only goes to the host, not panelists
- Respond to stakeholder questions

#### Other

- Some questions may require future team consideration
- Please reference slide number, standard section, etc., if applicable
- Team will address as many questions as possible
- Webinar and chat comments are not a part of the official project record
- Q&A recording will be posted within 48-72 hours

# **Questions and Answers**

## Webinar has ended - Thank you
