

Project 2008-12 - Coordinate Interchange Standards

Mapping Document

Project Purpose

The purpose of Project 2008-12 is to revise the set of Coordinate Interchange standards to ensure that each requirement is assigned to an owner, operator or user of the bulk power system, and not to a tool used to coordinate interchange. The drafting team also addressed the Interchange Subcommittee concerns related to the dynamic Transfers and Pseudo-ties and addressed previously identified stakeholder comments and applicable directives from Order 693. These issues and directives include defining communications on reloading interchange transactions due to different operational conditions and to bringing the set of Coordinate Interchange standards into conformance with the latest versions of the Reliability Standards Development Procedure, ERO Sanctions Guidelines and Uniform Compliance Monitoring and Enforcement Program.

Standard: INT-001-3, Interchange Information

Requirement in Approved Standard	Translation to New Standard or Other Action	Comments
<p>R1. The Load-Serving, Purchasing-Selling Entity shall ensure that Arranged Interchange is submitted to the Interchange Authority for:</p> <p>R1.1. All Dynamic Schedules at the expected average MW profile for each hour.</p> <p>Independent Expert Review recommendation: Retain Requirement.</p>	<p>Revised and Moved into INT-004-3</p>	<p>INT-004-3:</p> <p>R1. Each Purchasing-Selling Entity that secures energy to serve Load via a Dynamic Schedule or Pseudo-Tie shall ensure that a Request for Interchange is submitted as an on-time Arranged Interchange to the Sink Balancing Authority for that Dynamic Schedule or Pseudo-Tie, unless the information about the Pseudo-Tie is included in</p>

Standard: INT-001-3, Interchange Information		
Requirement in Approved Standard	Translation to New Standard or Other Action	Comments
		<p>congestion management procedure(s) via an alternate method. [<i>Violation Risk Factor: Lower</i>] [<i>Time Horizon: Operations Planning, Same-day Operations</i>]</p> <p>CISDT Consideration of Independent Expert Review recommendation: The CISDT concurs.</p>
<p>R2. The Sink Balancing Authority shall ensure that Arranged Interchange is submitted to the Interchange Authority:</p> <p>R2.1. If a Purchasing-Selling Entity is not involved in the Interchange, such as delivery from a jointly owned generator.</p> <p>R2.2. For each bilateral Inadvertent Interchange payback.</p> <p>Independent Expert Review recommendation: Retire per P81 criteria. A guideline exists in the functional specification for electronic tagging.</p>	Retired	<p>The CI SDT believes that this requirement is no longer necessary for reliability. Since the proposed INT-009-2 R1 makes it clear that the Net Scheduled Interchange term in the control equation can only include Confirmed Interchange as agreed to between Balancing Authorities, this by definition requires that an Arranged Interchange be created in order to implement the schedules listed in R2.1 and R2.2. From a reliability perspective, it is unimportant who creates these Arranged interchanges – only that they be created and confirmed prior to being entered into the control equation.</p> <p>CISDT Consideration of Independent Expert Review</p>

<p>Authorities shall coordinate the Interchange Schedule with the Transmission Operator of the HVDC tie.</p> <p>Independent Expert Review recommendation: Retain Requirement.</p>		<p>Adjacent Balancing Authority.</p> <p>R2. The Attaining Balancing Authority and the Native Balancing Authority shall use a dynamic value emanating from an agreed upon common source to account for the Pseudo-Tie in the Net Interchange Actual (NIA) term of their respective control ACE (or alternate control process). [Violation Risk Factor: Medium] [Time Horizon: Real Time Operations]</p> <p>R3. Each Balancing Authority in whose area the HVDC tie is controlled shall coordinate the Confirmed Interchange prior to its implementation with the Transmission Operator of the HVDC tie. [Violation Risk Factor: Medium] [Time Horizon: Real Time Operations, Operations Planning]</p> <p>CISDT Consideration of Independent Expert Review recommendation: The CISDT concurs.</p>

Standard: INT-004-2, Dynamic Interchange Transaction Modifications		
Requirement in Approved Standard	Translation to New Standard or Other Action	Comments
<p>R1. At such time as the reliability event allows for the reloading of the transaction, the entity that initiated the curtailment shall release the limit on the Interchange Transaction tag to allow reloading the transaction and shall communicate the release of the limit to the Sink Balancing Authority.</p> <p>Independent Expert Review recommendation: Retire per P81 criteria. A guideline exists in the functional specification for electronic tagging.</p>	Retired	<p>The CI SDT believes that at a minimum, this requirement does not belong in the “Dynamic Schedules” standard. However, for several reasons, the CI SDT further believes that this specific requirement is no longer required:</p> <ul style="list-style-type: none"> • It mandates a practice (releasing of E-Tag limits) that is process related. • The practice is already addressed in related NAESB standards (WEQ-004 Appendix B - E-Tag Actions). • Use of a limit (and the associated release of that limit) is only one particular way to address curtailments. Other ways exist that could be used in lieu of this approach. The reliability standard should not mandate a single approach when others may suffice. <p>CISDT Consideration of Independent Expert Review recommendation: The CISDT concurs.</p>
<p>R2. The Purchasing-Selling Entity responsible for tagging a Dynamic Interchange Schedule shall ensure the</p>	Revised	<p>INT-004-2 R2. The Purchasing-Selling Entity that submitted a</p>

Standard: INT-004-2, Dynamic Interchange Transaction Modifications		
Requirement in Approved Standard	Translation to New Standard or Other Action	Comments
<p>tag is updated for the next available scheduling hour and future hours when any one of the following occurs:</p> <p>R2.1. The average energy profile in an hour is greater than 250 MW and in that hour the actual hourly integrated energy deviates from the hourly average energy profile indicated on the tag by more than +10%.</p> <p>R2.2. The average energy profile in an hour is less than or equal to 250 MW and in that hour the actual hourly integrated energy deviates from the hourly average energy profile indicated on the tag by more than +25 megawatt-hours.</p> <p>R2.3. A Reliability Coordinator or Transmission Operator determines the deviation, regardless of magnitude, to be a reliability concern and notifies the Purchasing-Selling Entity of that determination and the reasons.</p> <p>Independent Expert Review recommendation: Retire per P81 criteria. A guideline exists in the functional specification for electronic tagging.</p>		<p>Request For Interchange in accordance with Requirement R1, shall ensure the Confirmed Interchange associated with that Dynamic Schedule or Pseudo-Tie is updated for future hours in order to support congestion management procedures if any one of the following occurs: [Violation Risk Factor: Lower] [Time Horizon: Operations Planning, Same Day Operations, Real Time Operations]</p> <p>2.1. For Confirmed Interchange greater than 250 MW for the last hour, the actual hourly integrated energy deviates from the Confirmed Interchange by more than 10% for that hour and that deviation is expected to persist.</p> <p>2.2. For Confirmed Interchange less than or equal to 250 MW for the last hour, the actual hourly integrated energy deviates from the Confirmed Interchange by more than 25 MW for that hour and that deviation is expected to persist.</p> <p>2.3. The Purchasing-Selling Entity receives notification from a Reliability Coordinator or Transmission Operator to update the Confirmed Interchange.</p>

Project 2008-12 - Coordinate Interchange Standards

Standard: INT-004-2, Dynamic Interchange Transaction Modifications		
Requirement in Approved Standard	Translation to New Standard or Other Action	Comments
		CISDT Consideration of Independent Expert Review recommendation: In the absence of clear industry consensus supporting the Independent Expert Review recommendation to retire this requirement, the CISDT believes that there is a reliability need to have the RFI updated for a Dynamic Schedule or Pseudo-Tie that is significantly different than the original schedule. This will allow the IDC and WITT Tool to have more accurate interchange data for reliability analysis.

Standard: INT-005-3, Interchange Authority Distributes Arranged Interchange		
Requirement in Approved Standard	Translation to New Standard or Other Action	Comments
<p>R1. Prior to the expiration of the time period defined in the timing requirements tables in this standard, Column A, the Interchange Authority shall distribute the Arranged Interchange information for reliability assessment to all reliability entities involved in the Interchange.</p> <p>R1.1. When a Balancing Authority or Reliability Coordinator initiates a Curtailment to Confirmed or Implemented Interchange for reliability, the Interchange Authority shall distribute the Arranged Interchange information for reliability assessment only to the Source Balancing Authority and the Sink Balancing Authority.</p> <p>Independent Expert Review recommendation: Retire per P81 criteria. A guideline exists in the functional specification for electronic tagging.</p>	Retired	<p>The CISDT is proposing retirement of this requirement. The entities to receive the transaction are included today in the eTag specification, Section 3.6.1.1.1. The timing requirement for the distribution of tags is removed from this standard, as they are currently included and expected to remain in the NAESB documentation.</p> <p>CISDT Consideration of Independent Expert Review recommendation: The CISDT concurs.</p>

Standard: INT-006-3, Response to Interchange Authority		
Requirement in Approved Standard	Translation to New Standard or Other Action	Comments
<p>R1. Prior to the expiration of the reliability assessment period defined in the timing requirements tables in this standard, Column B, the Balancing Authority and Transmission Service Provider shall respond to each On-time Request for Interchange (RFI), and to each Emergency RFI and Reliability Adjustment RFI from an Interchange Authority to transition an Arranged Interchange to a Confirmed Interchange.</p> <p>R1.1. Each involved Balancing Authority shall evaluate the Arranged Interchange with respect to:</p> <p>R1.1.1. Energy profile (ability to support the magnitude of the Interchange).</p> <p>R1.1.2. Ramp (ability of generation maneuverability to accommodate).</p> <p>R1.1.3. Scheduling path (proper connectivity of Adjacent Balancing Authorities).</p> <p>R1.2. Each involved Transmission Service Provider shall confirm that the transmission service arrangements associated with the</p>	<p>Revised</p>	<p>R1. Each Balancing Authority shall approve or deny each on-time Arranged Interchange or emergency Arranged Interchange that it receives and shall do so prior to the expiration of the time period defined in Attachment 1, Column B. [Violation Risk Factor: Lower] [Time Horizon: Operations Planning, Same-day Operations, Real-time Operations]</p> <p>1.1. Each Source and Sink Balancing Authority shall deny the Arranged Interchange or curtail Confirmed Interchange if it does not expect to be capable of supporting the magnitude of the Interchange, including ramping, throughout the duration of the Arranged Interchange.</p> <p>1.2. Each Balancing Authority shall deny the Arranged Interchange or curtail Confirmed Interchange if the Scheduling Path (proper connectivity of Adjacent Balancing Authorities) between it and its Adjacent Balancing Authorities is invalid.</p> <p>R2. Each Transmission Service Provider shall approve</p>

Standard: INT-006-3, Response to Interchange Authority		
Requirement in Approved Standard	Translation to New Standard or Other Action	Comments
<p>Arranged Interchange have adjacent Transmission Service Provider connectivity, are valid and prevailing transmission system limits will not be violated.</p> <p>Independent Expert Review recommendation: Retire per P81 criteria. A guideline exists in the functional specification for electronic tagging.</p>		<p>or deny each on-time Arranged Interchange or emergency Arranged Interchange that it receives and shall do so prior to the expiration of the time period defined in Attachment 1, Column B. [Violation Risk Factor: Lower] [Time Horizon: Operations Planning, Same-day Operations, Real-time Operations]</p> <p>2.1. Each Transmission Service Provider shall deny the Arranged Interchange or curtail Confirmed Interchange if the transmission path (proper connectivity of adjacent Transmission Service Providers) between it and its adjacent Transmission Service Providers is invalid.</p> <p>CISDT Consideration of Independent Expert Review recommendation: In the absence of clear industry consensus supporting the Independent Expert Review recommendation to retire this requirement, the CISDT believes that this distribution requirement may currently drive how software performs this function. However, if that software were not present, this requirement clearly directs who needs to receive the results of the evaluations that were performed in order for the</p>
