Count on Us®

Consumers Energy Safety Culture Journey

Dramatic drop of 37% in recordables. Best in Company History. (2007 to 2008)

Uptick in Injuries

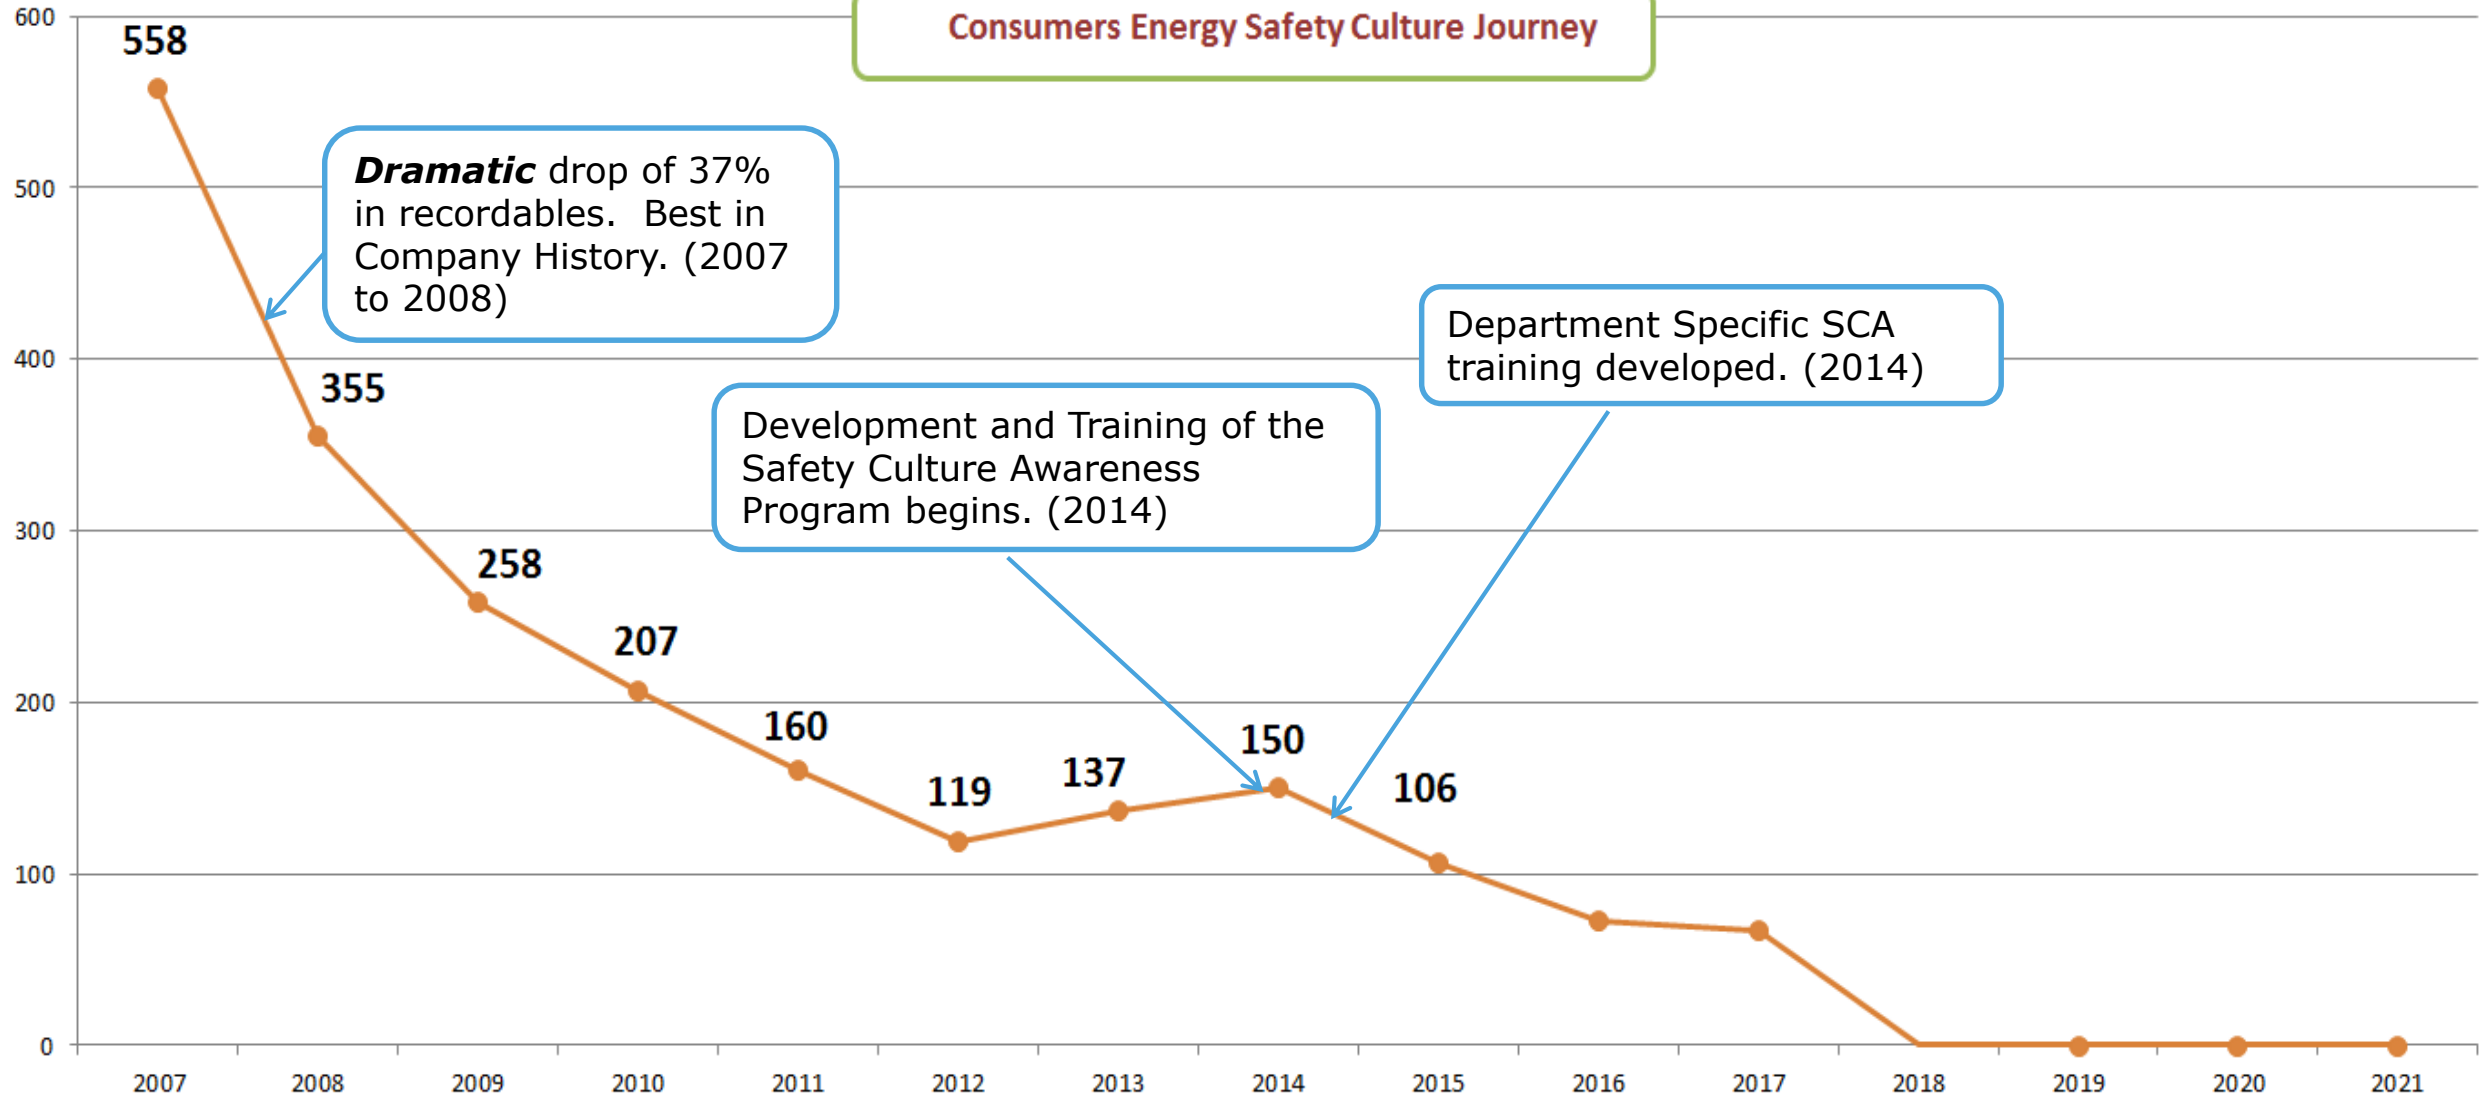

INSANITY EFFECT

*If you do what you've always done,
You will get what you've always got.*

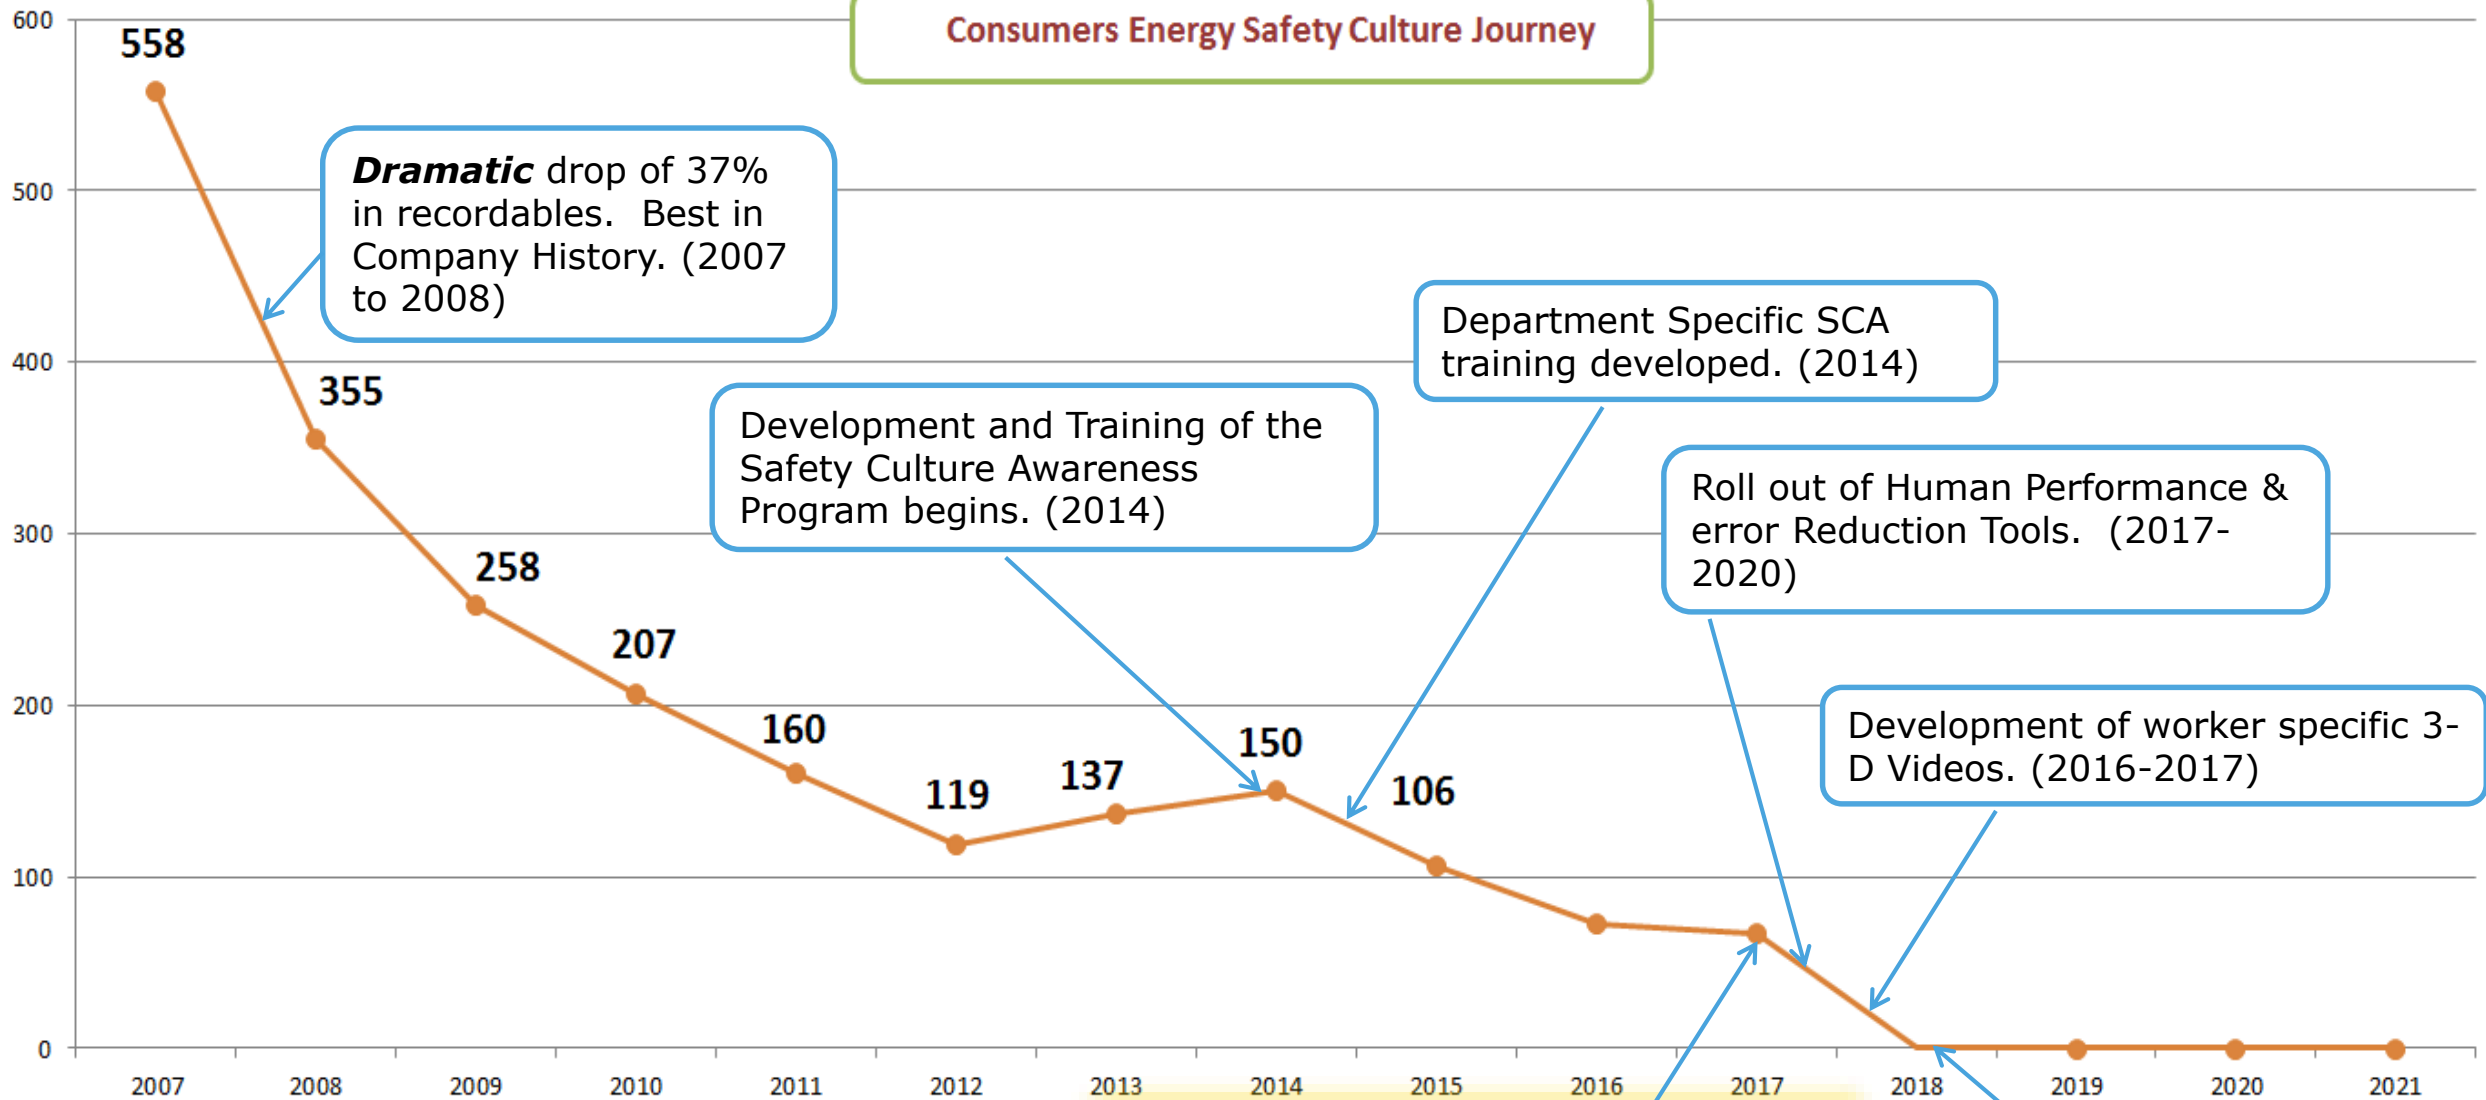

*To get what you never had,
You must do what you never did.*

Consumers Energy Safety Culture Journey

Consumers Energy Safety Culture Journey

Dramatic drop of 37% in recordables. Best in Company History. (2007 to 2008)

Development and Training of the Safety Culture Awareness Program begins. (2014)

Department Specific SCA training developed. (2014)

Roll out of Human Performance & error Reduction Tools. (2017-2020)

Development of worker specific 3-D Videos. (2016-2017)

2015/2016/2017 SAFEST 3 YEARS IN 135 yr HISTORY!!
65 Recordables

Developing 3D video / AR / VR for accident prevention and pre-operational training for employees

REAL-TIME COMPUTER BASED SIMULATION

NERC/NATF HP conference
(2018 Human Performance Conference)

Benefits of Using Simulators

- ▶ Interactive computer-based simulations bridge the gap between theory and hands-on by allowing the learner to practice difficult procedures inside a safe environment
- ▶ Both safety and reliability are achieved by keeping your workforce knowledgeable of new procedures and equipment
- ▶ “Learn by doing” provides 75% to 95% retention rates and simulators can be deployed on mobile devices and learning management systems

Growing Popularity of Simulator Training

- ▶ After 20 years of providing simulator training to the Utility and Energy Industries, there is a large shift now to real-time simulations
- ▶ This shift is happening because of:
 - ▶ AI - Artificial Intelligence
 - ▶ Cloud based data analytics
 - ▶ Increased computer processing speeds
 - ▶ Increased mobile & internet communication bandwidth (5G is 100x faster than 4G)
- ▶ People are now able to get instant information like calculations and visual results

Artificial Intelligence in Simulators

- ▶ AI can greatly increase reliability and emergency responses. Here are some major examples of real-time simulators:
 - ▶ Simulators have been used by police departments predicting where and approximately when a minor crime will take place (home break-ins) so they can respond before it happens
 - ▶ EMS being aware and informed about areas of drug use and overdoses
 - ▶ Predicting where forest fires can start due to lightning strikes
 - ▶ Predicting major earthquakes
 - ▶ SCADA Data Analytics

3DInternet Simulators

- ▶ Here are a few examples of how some of our simulators are being used in the Utility industry for real-time feedback:

Transformer Simulator

- ▶ Used for live 24/7 troubleshooting

Substation Circuit Breaker Troubleshooter

- ▶ Used by experienced workers as a real-time on the job refresher

Electrical Recloser Simulator

- ▶ Rapidly train workforce prior to new equipment deployment so line workers can operate and install correctly

Virtual Gas Leak Simulation

- ▶ Creates virtual gas leaks that communicate to real hand-held gas meters
- ▶ Allows instructors to vary leak data and locations while getting instant feedback on the steps workers take to locate them

Motor Control Simulator

- ▶ Real-time design, testing and producing quotations

PLC Simulator

- ▶ Connecting real-time PLC programming software to a virtual conveyor belt to test and design configurations

Transmission line pre-design utilizing GIS, GPS and EMF data

- ▶ Used in real-time open-house discussions covering rural areas

Facilities Design

- ▶ Office setup, furniture, carpet and paint colors

Emergency Response and Disaster Planning

- ▶ Used to increase reliability by:
 - ▶ Preventing potential down times and injuries
 - ▶ Providing training to Patroller and wire watchers prior to a major storm
 - ▶ Being able to train for an emergency instead of just planning for it
- ▶ Using real-time plume calculations for:
 - ▶ deadly gases and spills
 - ▶ connecting to live wind data
 - ▶ traffic and pedestrian flows

Table Top Simulator

- ▶ Used for pre-job briefings, design and engineering, community open houses, accident reconstruction, creating custom images and scenes, weekly safety meetings

VR and AR

- ▶ Technologies like VR (virtual reality) and AR (Augmented Reality) are now allowing people to visually experience and simulate environments and processes

VR and AR

- ▶ VR is currently the most immersive and interactive learning solution available next to very expensive hardware simulators like Flight Simulators
- ▶ VR can involve your human senses of touch, smell, hearing, and of course sight
- ▶ With wireless technology, 5G cell networks, and incorporation 3D cameras and smart sensors, we can look forward to interacting immediately with everything and everyone using VR and AR
- ▶ The applications are endless!
