Introduction and Chair's Remarks

NERC Antitrust Compliance Guidelines and Public Announcement

Agenda Items

1. **Carnegie Mellon University Presentation** – Gerad Freeman, Pacific National Labs
 - a. Study by Carnegie Mellon University looking at building on site CNG storage at natural gas fired generators in New England as a substitute for firm transportation as well as for dual fuel capabilities. Additional discussion around articulating this information in front of state regulatory bodies and potential next steps will be discussed.
2. **California Resources Adequacy Discussion** – Thomas Popick
 - a. Analysis of the recent California resource adequacy issues including the evolution of coal, nuclear, and natural gas retirements in conjunction with increased wind and solar. The discussion will focus on both fuel assurance and resource adequacy as it can be argued that the Aliso Canyon outage continues to affect gas fired generation and retired units have resulted in resource adequacy issues.
3. **Reliability Guideline** – Mike Knowland
 - a. Discussion on potential metrics on the Reliability Guide.
4. **Closing Remarks**

*Background materials included.
