

# Implementation Plan for Project 2007-03: Real-Time Operations

### **Prerequisite Approvals**

Some changes made in this project are dependent on corresponding changes being approved in Project 2006-06, Reliability Coordination:

- COM-001-1—<u>:</u> Telecommunications
- COM-002-2—<u>:</u> Communications and Coordination
- IRO-001-1—<u>:</u> Reliability Coordination Responsibilities and Authorities
- IRO-002-1—: Reliability Coordination Facilities
- IRO-014-1—<u>:</u> Procedures to Support Coordination between Reliability Coordinators
- IRO-015-1—: Notifications and Information Exchange between Reliability Coordinators
- IRO-016-1—<u>:</u> Coordination of Real-Time Activities between Reliability Coordinators
- PER-004-1—: Reliability Coordination Staffing

It is the intent of the SDT that Project 2006-06 and Project 2007-03 be filed together so that the changes to the different standards can be coordinated.

#### **Revision to Sections of Approved Standards and Definitions**

There are no new definitions in the proposed set of standards.

However, three separate<u>Two</u> drafting teams wrote definitions for Reliability Directive. The three drafting teams(Project 2006-06 and Project 2007-03) have coordinated on a common definition and agreed that the Reliability Coordinational Standards Drafting Team (Project 2006-06) would write the definition and post it for vetting by the industry. The agreed upon definition is included here for ease of reference although it needs to be noted that this is still a draft and hasn't been approved by the industry.

**Reliability Directive** — A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.

#### **Compliance with Standard**

There are three standards associated with this project for which industry approval will be requested: TOP-001-2: Coordination of Transmission Operations, TOP-002-3: Operations Planning, and TOP-003-1: Operational Reliability Data.

| Standard   | Functions that must Comply with the Associated<br>Requirements |    |    |     |    |     |    |    |
|--|--|----|----|-----|----|-----|----|----|
|  | TOP  | BA | GO | GOP | IA | LSE | DP | TO |
| PER-001-0: Operating Personnel<br>Responsibility and Authority | Retired  |    |    |     |    |     |    |    |
| TOP-001-2: Coordination of Transmission<br>Operations          | Х  | Х  |    | Х   |    | Х   | Х  |    |

116-390 Village Boulevard Princeton, New Jersey 08540-5721 609.452.8060 | www.nerc.com

| TOP-002-3: Operations Planning   |         |   |   |        |   |   |  |   |
|--|---------|---|---|--------|---|---|--|---|
| TOP-003-1: Operational Reliability Data  | Х       | Х | Х | Х      | Х | Х |  | Х |
| TOP-004-2: Real-Time Transmission     Retired       Operations     Retired   |         |   |   |        |   |   |  |   |
| TOP-005-2: Operational Reliability Data  | Retired |   |   |        |   |   |  |   |
| TOP-006-1: Monitoring System Conditions  | Retired |   |   |        |   |   |  |   |
| TOP-007-0: Reporting System Operating Limits<br>(SOL) and Interconnection Reliability Operating<br>Limit (IROL) Violations |         |   |   |        |   |   |  |   |
| TOP-008-1: Response to Transmission Limit Violations   |         |   |   | Retire | d |   |  |   |

The effective date is the date entities are expected to meet the performance identified in these standards. Note that entities have been given several months beyond the regulatory approval date (preparation time) to fully comply with new requirements.

The assumption used by the SDT in establishing this Implementation Plan is that the project mentioned in the prerequisites: Project 2006-06, Reliability Coordination; has been approved prior to the implementation of this Project 2007-03, Real Time Operations.

#### **Effective Date of Revised Standards**

All requirements will become effective the first day of the first calendar quarter twenty-four months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twenty-four months following Board of Trustees adoption.

The twenty-four month period is to allow for entities to update processes, develop data specifications, and train operators on the revised requirements.

## **Retirement Date for Existing Standards**

All requirements will be retired twenty-four months following the first day of the first quarter following regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements will be retired effective the first day of the first calendar quarter twenty-four months following Board of Trustees adoption.

## **Mapping Table**

The following table indicates the disposition of the existing standards requirements related to this project.

| Existing             | Resolution  |
|----------------------|---|
| Requirement          |   |
|                      | TOP-001-1   |
| <u>R1 - Existing</u> | Each Transmission Operator shall have the responsibility and clear          |
|                      | decision-making authority to take whatever actions are needed to            |
|                      | ensure the reliability of its area and shall exercise specific authority to |
|                      | alleviate operating emergencies.  |
| R1 <u>-</u>          | Deleted – Deletion of this requirement doesn't alleviate responsibility     |
| Resolution           | for actions as each individual requirement in the Reliability Standards     |
|                      | now specifies an action and a responsible entity. Needed actions            |
|                      | required for reliability of the bulk power system have been more clearly    |

|                      | T   |
|----------------------|---|
| R2 - Existing        | <ul> <li>laid out in revised standards. (See FERC Order 693a, paragraph 112.)<br/>The requirement is also non-specific, ambiguous, and not performance oriented. If an entity doesn't perform as specified in an individual requirement, then they are held accountable at that level. This is a generic requirement that is no longer necessary since there are now specific requirements that cover all needed reliability actions. All of this makes this requirement redundant. The overall reliability of the bulk power system is not adversely affected by the deletion of this requirement.</li> <li>In FERC Order 693a, paragraph 112, the Commission clarifies that a Reliability Coordinator's authority to issue directives arises out of the Commission's approval of Reliability Standards that mandate compliance with such directives. The SDT believes that this same logic applies to Transmission Operators and Balancing Authorities and that makes this requirement superfluous and thus it can be deleted.</li> <li>Each Transmission Operator shall take immediate actions to alleviate</li> </ul> |
|                      | operating emergencies including curtailing transmission service or<br>energy schedules, operating equipment (e.g., generators, phase shifters,<br>breakers), shedding firm load, etc.   |
| R2<br>Resolution     | Deleted for Reliability Coordinator - The Reliability Coordinator has the ultimate responsibility for the reliability of the bulk power system and the Transmission Operator must respond to Reliability Coordinator directives as per proposed IRO-001-2, Requirement R2.  |
|                      | Replaced for Transmission Operator – Based on the interpretation of the undefined term 'operating emergency' as equivalent to 'Emergency' as defined in the Glossary which points to 'Adverse Reliability Impact' which in turn points to IROLs, this has been replaced by proposed TOP-001-2, Requirements R7 through R10. This has been replaced by proposed  |
|                      | TOP-001-2, Requirement R11. The undefined term 'operating<br>emergencies' is no longer utilized and the requirement has been made<br>more stringent by not restricting Transmission Operator actions to that<br>undefined condition. The inclusion of the $T_v$ term adds clarity and<br>tends to make the new requirement more stringent than the existing<br>requirement by providing a relevant timeframe.   |
| R3 <u>- Existing</u> | Requirement by providing a relevant timetrame.         Moved for Reliability Coordinator - All references to the Reliability Coordinator and Reliability Coordinator responsibilities have been removed from the TOP standards as they are now covered in the revisions being undertaken in Project 2006-06. This requirement is now covered in the proposed IRO-001-2, Requirements R2 & R3.   |
|                      | Replaced for Transmission Operator – Proposed TOP-001-2, Requirement<br>R1 now covers the Balancing Authority and Generator Operator responding to<br>Transmission Operator directives. Each Transmission Operator, Balancing<br>Authority, and Generator Operator shall comply with reliability<br>directives issued by the Reliability Coordinator, and each Balancing<br>Authority and Generator Operator shall comply with reliability<br>directives issued by the Reliability Coordinator, and each Balancing<br>Authority and Generator Operator shall comply with reliability<br>directives issued by the Transmission Operator, unless such actions<br>would violate safety, equipment, regulatory or statutory requirements.<br>Under these circumstances the Transmission Operator, Balancing   |
|                      | Authority or Generator Operator shall immediately inform the<br>Reliability Coordinator or Transmission Operator of the inability to<br>perform the directive so that the Reliability Coordinator or<br>Transmission Operator can implement alternate remedial actions.   |

| <u>R3 -</u>          | Deleted - This requirement is now covered in the proposed IRO-001-2,            |
|----------------------|---|
| <u>Resolution</u>    | Requirements R2 & R3.   |
| <u>R4 - Existing</u> | Each Distribution Provider and Load Serving Entity shall comply with            |
|                      | all reliability directives issued by the Transmission Operator, including       |
|                      | shedding firm load, unless such actions would violate safety,                   |
|                      | equipment, regulatory or statutory requirements. Under these                    |
|                      | circumstances, the Distribution Provider or Load Serving Entity shall           |
|                      | immediately inform the Transmission Operator of the inability to                |
|                      | perform the directive so that the Transmission Operator can implement           |
|                      | alternate remedial actions.   |
| R4 -                 | Retained and moved to proposed TOP-001-2, Requirement R1.                       |
| <u>Resolution</u>    | Retained and moved to proposed TOP-001-2, Requirement K1.                       |
| <u>R5 - Existing</u> | Each Transmission Operator shall inform its Reliability Coordinator             |
|                      | and any other potentially affected Transmission Operators of real time          |
|                      | or anticipated emergency conditions, and take actions to avoid, when            |
|                      | possible, or mitigate the emergency.  |
| R5 -                 | Retained and moved to proposed TOP-001-2, Requirement R <sup>2</sup> <u>3</u> . |
| Resolution           | Retained and moved to proposed 101-001-2, Requirement $RE_{\underline{2}}$ .    |
| Kesolution           |   |
|                      | The intent of the "mitigation" phrasing was replaced by proposed TOP-           |
|                      | 001-2, Requirement R10R11. (Also, see explanation for R2 above.)                |
|                      | Also, this is covered in approved EOP-001-0, Requirement R3 and the             |
|                      | proposed EOP-001-2, Requirement R2.   |
| <u>R6 - Existing</u> | Each Transmission Operator, Balancing Authority, and Generator                  |
|                      | Operator shall render all available emergency assistance to others as           |
|                      | requested, provided that the requesting entity has implemented its              |
|                      | comparable emergency procedures, unless such actions would violate              |
|                      | safety, equipment, or regulatory or statutory requirements.                     |
| R6 -                 |   |
| _                    | Retained and moved to proposed TOP-001-2, Requirement $\mathbb{R3R4}$ for       |
| Resolution           | the Transmission Operator.  |
|                      |   |
|                      | The Generator Operator was removed since they can't be contacted                |
|                      | directly by others and will only respond to such requests if they were in       |
|                      | the form of a Reliability Directive from its Transmission Operator              |
|                      | which is covered in proposed TOP-001-2, Requirement R1.                         |
|                      |   |
|                      | The proposed EOP-001-02, Requirement R1 covers the Balancing                    |
|                      | Authority so to eliminate a redundancy the Balancing Authority has              |
|                      | been removed from this requirement. In addition, the Balancing                  |
|                      | Authority must still respond to any Reliability Directive from the              |
|                      | Transmission Operator as stated in proposed TOP-001-2, Requirement              |
|                      | R1.   |
|                      |   |
| <u>R7 - Existing</u> | Each Transmission Operator and Generator Operator shall not remove              |
|                      | Bulk Electric System facilities from service if removing those facilities       |
|                      | would burden neighboring systems unless: 7.1 - For a generator outage,          |
|                      | the Generator Operator shall notify and coordinate with the                     |
|                      | Transmission Operator. The Transmission Operator shall notify the               |
|                      | Reliability Coordinator and other affected Transmission Operators, and          |
|                      | coordinate the impact of removing the Bulk Electric System facility.            |
|                      | 7.2 - For a transmission facility, the Transmission Operator shall notify       |
|                      | and coordinate with its Reliability Coordinator. The Transmission               |
|                      | and coordinate with its Renability Coordinator. The Harshillssion               |

|                      | Operator shall notify other affected Transmission Operators, and           |
|----------------------|--|
|                      | coordinate the impact of removing the Bulk Electric System facility.       |
|                      | 7.3 - When time does not permit such notifications and coordination, or    |
|                      | when immediate action is required to prevent a hazard to the public,       |
|                      | lengthy customer service interruption, or damage to facilities, the        |
|                      | Generator Operator shall notify the Transmission Operator, and the         |
|                      | · · · ·  |
|                      | Transmission Operator shall notify its Reliability Coordinator and         |
|                      | adjacent Transmission Operators, at the earliest possible time.            |
| R7 <u>-</u>          | Retained in concept but re-worded as part of proposed TOP-001-2,           |
| <u>Resolution</u>    | Requirements R4 & Requirement R5.  |
|                      |  |
|                      | After the fact notifications have been deleted since those actions will be |
|                      | seen through telemetry as cited in the proposed TOP-003-2 and              |
|                      | proposed IRO-001-2.  |
|                      |  |
|                      | The term 'burden' was considered by the SDT to be vague, ambiguous,        |
|                      | •  |
|                      | unmeasurable, and undefined and has been replaced by a NERC                |
|                      | defined term 'Burden'Adverse Reliability Impact'.                          |
| <u>R8 - Existing</u> | During a system emergency, the Balancing Authority and Transmission        |
|                      | Operator shall immediately take action to restore the Real and Reactive    |
|                      | Power Balance. If the Balancing Authority or Transmission Operator is      |
|                      | unable to restore Real and Reactive Power Balance it shall request         |
|                      | emergency assistance from the Reliability Coordinator. If corrective       |
|                      | action or emergency assistance is not adequate to mitigate the Real and    |
|                      | Reactive Power Balance, then the Reliability Coordinator, Balancing        |
|                      |  |
|                      | Authority, and Transmission Operator shall implement firm load             |
| <b>D</b> 0           | shedding.  |
| R8 <u>-</u>          | Real Power Balance and Reactive Power Balance are not defined terms.       |
| Resolution           |  |
|                      | First sentence – Deleted due to:- The Balancing Authority is covered in    |
|                      | approved EOP-002-2.1, Requirement R6. Therefore, this portion of the       |
|                      | requirement is superfluous redundant and can be deleted. The               |
|                      | Transmission Operator does not balance real power so that part of the      |
|                      | sentence can be deleted- <u>per the NERC Functional Model V5.</u>          |
| 1                    | Approved VAR-001-1, Requirement R8 covers reactive power                   |
|                      |  |
|                      | requirements and the meaning of balancing reactive power for the           |
| 1                    | Transmission Operator. The Balancing Authority must be told by the         |
|                      | Transmission Operator to take actions regarding reactive power per the     |
|                      | NERC Functional Model V5 (see proposed TOP-001-2, Requirement              |
|                      | R1) and can therefore be deleted from this part of the requirement.        |
|                      |  |
|                      | Second sentence – Deleted due to: The Balancing Authority must be          |
| '                    | told by the Transmission Operator to take actions regarding reactive       |
|                      | power (see proposed TOP-001-2, Requirement R1) and can thus be             |
|                      | deleted. Transmission Operators are covered under approved VAR-            |
|                      | 1 11   |
|                      | 001-1, Requirement R1 thus making this part of the requirement             |
|                      | redundant.   |
|                      |  |
|                      | Third sentence – The Reliability Coordinator is now covered in             |
|                      | approposved IRO-009-1, Requirements R1 through R4and R2 and can            |

|                      | be deleted here. The Transmission Operator and Balancing Authority  |
|----------------------|---|
|                      | are covered in approved EOP-003-1, Requirement R1. Therefore, this  |
|                      | sentence is redundant and can be deleted.   |
|                      | TOP-002-2   |
| <u>R1 - Existing</u> | Each Balancing Authority and Transmission Operator shall maintain a   |
|                      | set of current plans that are designed to evaluate options and set  |
|                      | procedures for reliable operation through a reasonable future time  |
|                      | period. In addition, each Balancing Authority and Transmission  |
|                      | Operator shall be responsible for using available personnel and system  |
|                      | equipment to implement these plans to ensure that interconnected  |
|                      | system reliability will be maintained.  |
| R1 -                 | First sentence – Deleted for Balancing Authority, Retained for  |
| Resolution           | Transmission Operator -   |
|                      | The Balancing Authority is required to balance by approved BAL-001-   |
|                      | 0.1a and approved BAL-002-0 and the proposed BAL-002-1 and must   |
|                      | take action per approved EOP-002-2.1, Requirement R6 and thus can   |
|                      | be deleted.   |
|                      |   |
|                      | Retained for Transmission Operator in proposed TOP-002-3,   |
|                      | Requirements R1 through R3. This is patterned after the <u>approposved</u>  |
|                      | IRO-008-1, Requirement R1 for the Reliability Coordinator.  |
|                      |   |
|                      | Second sentence – Deleted-  |
|                      | The Balancing Authority is covered in approved BAL-002-0, Requirement R3  |
|                      | as superfluous. Use of appropriate personnel and thus is redundant and  |
|                      | can be deleted here. equipment is incumbent   |
|                      | The Transmission Operator is covered in the proposed TOP-001-2,   |
|                      | Requirement R10 and is thus also redundant and can be deleted. In addition, approved EOP-001-2, Requirement R3 covers the Transmission Operator |
|                      | having plans in place to mitigate emergency conditions.responsible entities   |
|                      | as per their certification as NERC registered entities.   |
| <u>R2 - Existing</u> | Each Balancing Authority and Transmission Operator shall ensure its   |
|                      | operating personnel participate in the system planning and design study   |
|                      | processes, so that these studies contain the operating personnel  |
|                      | perspective and system operating personnel are aware of the planning  |
|                      | purpose.  |
| R2 <u>-</u>          | Deleted - The SDT reviewed the purpose of the Reliability Standard and  |
| <u>Resolution</u>    | believes that this requirement referred to operations planning. Given   |
|                      | the current definition of Transmission Operator in the Glossary and   |
|                      | Functional Model v5, operations planning is part of what the  |
|                      | Transmission Operator is required to do and as such this requirement is   |
|                      | no longer needed and can be deleted.  |
| <u>R3 - Existing</u> | Each Load Serving Entity and Generator Operator shall coordinate  |
|                      | (where confidentiality agreements allow) its current-day, next-day, and   |
|                      | seasonal operations with its Host Balancing Authority and   |
|                      | Transmission Service Provider. Each Balancing Authority and   |
|                      | Transmission Service Provider shall coordinate its current-day, next-   |
|                      | day, and seasonal operations with its Transmission Operator.  |
| R3 <u>-</u>          | For all but the Transmission Service Provider, proposed TOP-003-2   |
| <u>Resolution</u>    | requires the transfer of any and all data required for Real-time  |

|                      | operations or Operational Planning Analyses regardless of timeframe   |
|----------------------|---|
|                      | involved. That makes this requirement redundant and it can be deleted.  |
|                      | The Transmission Service Provider is covered in the provisions are deleted due to:  |
|                      | <ul> <li>Proposed MOD-001-1a, Requirement R1: Transmission</li> <li>Operators select transfer capability methodology from proposed</li> </ul> |
|                      | MOD-028-1, MOD, -029-1, and, or -030.   |
|                      | <u>Proposed</u> MOD-030-1 and is thus redundant and can be deleted.   |
|                      | Requirement R3: Transmission Operator gives transmission  |
|                      | model updated at least once per day to Transmission Service<br>Provider   |
|                      | • Proposed MOD-001-1a, Requirement R2: Transmission Service   |
|                      | Providers use the methodology designated in proposed MOD-   |
|                      | 001-1a, Requirement R1 by the Transmission Operator.  |
| <u>R4 - Existing</u> | Each Balancing Authority and Transmission Operator shall coordinate   |
|                      | (where confidentiality agreements allow) its current-day, next-day, and   |
|                      | seasonal planning and operations with neighboring Balancing   |
|                      | Authorities and Transmission Operators and with its Reliability   |
|                      | Coordinator, so that normal Interconnection operation will proceed in   |
|                      | an orderly and consistent manner.   |
| R4 <u>-</u>          | Deleted – Proposed TOP-003-2 requires the transfer of any and all data  |
| Resolution           | required for Real-time operations or Operational Planning Analyses  |
|                      | between and amongst Balancing Authorities and Transmission  |
|                      | Operators regardless of timeframe involved. That makes this   |
|                      | requirement redundant and it can be deleted for Balancing Authorities   |
|                      | and Transmission Operators.   |
|                      | Data requirements for Reliability Coordinators are covered in   |
|                      | <u>approposv</u> ed IRO-010-1, Requirement R3 making this requirement   |
|                      | redundant for Reliability Coordinators and it is therefore deleteds the   |
|                      | Reliability Coordinator has been removed.   |
| <u>R5 - Existing</u> | Each Balancing Authority and Transmission Operator shall plan to  |
|                      | meet scheduled system configuration, generation dispatch, interchange   |
|                      | scheduling and demand patterns.   |
| R5 <u>-</u>          | The Balancing Authority is covered by approved BAL-001-0.1a and   |
| <u>Resolution</u>    | thus can be deleted.  |
|                      | The Functional Model requires a Balancing Authority to operate under  |
|                      | the direction of the Transmission Operator for such matters. It is also a   |
|                      | basic tenet of operations and good standards that only one entity should  |
|                      | be 'in charge'. The Balancing Authority can only work within the  |
|                      | constraints handed down by the Transmission Operator. Any needed  |
|                      | coordination issues are built in to the Functional Model. Therefore, the  |
|                      | Transmission Operator should be doing the plan and passing it down to   |
|                      | the Balancing Authority.  |
|                      |   |
|                      | The Balancing Authority gets any needed data to the Transmission  |
|                      | Operator through the data specification requirements in proposed TOP-   |

|                          | 003-2.  |
|--------------------------|---|
|                          | Transmission Operator - replaced by proposed TOP-002-3,<br>Requirements R1-through R3.  |
| <u>R6 - Existing</u>     | Each Balancing Authority and Transmission Operator shall plan to<br>meet unscheduled changes in system configuration and generation<br>dispatch (at a minimum N-1 Contingency planning) in accordance with<br>NERC, Regional Reliability Organization, subregional, and local   |
| R6_<br><u>Resolution</u> | reliability requirements.The Balancing Authority is covered by approved BAL-002-0_andproposed BAL-002-1, Requirements R2 through R4 and approvedEOP-002-2.1_and the proposed EOP-002-3, Requirement R6 and thuscan be deleted.  |
|                          | The Functional Model requires a Balancing Authority to operate under<br>the direction of the Transmission Operator for such matters. It is also a<br>basic tenet of operations and good standards that only one entity should<br>be 'in charge'. The Balancing Authority can only work within the<br>constraints handed down by the Transmission Operator. Any needed<br>coordination issues are built in to the Functional Model. Therefore, the<br>Transmission Operator should be doing the plan and passing it down to<br>the Balancing Authority.  |
|                          | The Balancing Authority gets any needed data to the Transmission<br>Operator through the data specification requirements in proposed TOP-<br>003-2.   |
|                          | <ul> <li>Transmission Operator - replaced by proposed TOP-002-3,<br/>Requirements R1-through R3 The n-1 contingency planning is 'built<br/>in' to the Operational Planning Analysis since SOLs are derived<br/>according to FAC-010-2.1, FAC-011-2, and FAC-014-2 which includes<br/>contingency planning.</li> <li>The SDT does not believe that there is a need for the last part of the<br/>sentence 'in accordance with' with the advent of the ERO and<br/>enforceable reliability standards.</li> </ul>   |
|                          | As stated in the NERC Functional Model V4,V5: "the Balancing<br>Function: "Integrates resource plans ahead of time, maintains load-<br>interchange-generationAuthority's mission is to maintain the balance<br>between loads and resources in real time within aits Balancing<br>Authority Area and supports Interconnectionby keeping its actual<br>interchange equal to its scheduled interchange and meeting its<br>frequency in real timebias obligation." To this end and in accordance<br>with approved NERC Reliability Standards BAL-001-0.1a and BAL-<br>002-0, (and the proposed BAL-002-1), Balancing Authorities are<br>required to meet all control performance and disturbance recovery<br>criteria for any system condition. Balancing Authorities are not<br>responsible for the operation of the transmission system. The<br>Transmission Operator is responsible for the real-time operating<br>reliability of the transmission assets under its purview, and as such has |

|                      | the authority to issue reliability-related directives to entities within its |
|----------------------|--|
|                      | Transmission Operator Area. Balancing Authorities are required to            |
|                      | implement directives received from the Transmission Operator or the          |
|                      | Reliability Coordinator regarding load, generation and interchange for       |
|                      |  |
|                      | transmission concerns both predicted (e.g., through Unit Commitment)         |
|                      | and actual (e.g., through re-dispatch, Interchange modifications or load     |
|                      | shedding). If the Balancing Authorities' actions do not resolve the          |
|                      | transmission issues, it is the Transmission Operators' or Reliability        |
|                      |  |
|                      | Coordinators' responsibility to direct alternative actions.                  |
| <u>R7 - Existing</u> | Each Balancing Authority shall plan to meet capacity and energy              |
|                      | reserve requirements, including the deliverability/capability for any        |
|                      | single Contingency.  |
| R7 -                 | The Balancing Authority is required to always plan to meet and recover       |
|                      |  |
| Resolution           | from Contingency events as stated in approved BAL-002-0 <u>and the</u>       |
|                      | proposed BAL-002-1, Requirement R2 and therefore this requirement            |
|                      | is redundant and can be deleted.   |
|                      |  |
|                      | Deliverability is not in the control of the Balancing Authority; it is a     |
|                      |  |
|                      | Transmission Operator responsibility and is covered in proposed TOP-         |
|                      | 002-3, Requirements R1-and R2. Operational Planning Analysis                 |
|                      | includes deliverability considerations since any deliverability problems     |
|                      | will appear as limit violations in the analysis.                             |
| R8 - Existing        | Each Balancing Authority shall plan to meet voltage and/or reactive          |
| <u>Ko Existing</u>   |  |
|                      | limits, including the deliverability/capability for any single               |
|                      | contingency.   |
| R8 <u>-</u>          | Deleted The Balancing Authority must be told by the Transmission Operator    |
| Resolution           | to take actions regarding reactive power (see proposed TOP-001-2,            |
|                      | Requirement R1) and thus this requirement can be deleted.                    |
|                      |  |
|                      | Voltage and reactive are the responsibility of the Transmission Operator and |
|                      | are covered under approved VAR-001-1, Requirement R1.                        |
|                      |  |
|                      | Delivershility is not in the control of the Delensing Authority, it is a     |
|                      | Deliverability is not in the control of the Balancing Authority; it is a     |
|                      | Transmission Operator responsibility and is covered in proposed TOP-         |
|                      | 002-3, Requirement R1 and R2. since any deliverability problems will         |
|                      | appear as limit violations in the analysis.                                  |
| <u>R9 - Existing</u> | Each Balancing Authority shall plan to meet Interchange Schedules and        |
| <u>A LAISting</u>    |  |
| <b>D</b> 0           | ramps.   |
| R9 <u>-</u>          | This is covered in approved INT-003-2, Requirement R1 and is thus            |
| <b>Resolution</b>    | redundant and can be deleted.  |
| R10 - Existing       | Each Balancing Authority and Transmission Operator shall plan to             |
|                      | meet all System Operating Limits (SOLs) and Interconnection                  |
|                      |  |
| <b>D</b> 10          | Reliability Operating Limits (IROLs).  |
| R10 <u>-</u>         | Balancing Authority - deleted as for transmission, the Balancing             |
| Resolution           | Authority is only responsible to respond to Reliability Directives as per    |
|                      | the definition of Balancing Authority in the Glossary and thus this          |
|                      | requirement is not applicable to the Balancing Authority. The SDT            |
|                      |  |
|                      | position is that SOLs and IROLs are transmission itemslimits for which       |
|                      | the Balancing Authority has no information may not have (and is not          |
|                      | required to have) the ability to monitor or control. The Transmission        |
|                      | Operator, who is required to monitor SOLs, instructs the Balancing           |
|                      | permore, who is required to monitor bolls, instructs the building            |

|                        | Authority as to what to do in these situations.  |
|------------------------|--|
|                        | Transmission Operator - covered in proposed TOP-002-3, Requirement R1 (analysis of SOLs) & Requirement R2 (avoid IROLs-).                    |
|                        | As stated in the NERC Functional Model V4 <u>5</u> , <u>"the Balancing</u>   |
|                        | AuthorityAuthority's mission is responsible for integrating resource plans   |
|                        | ahead of time, maintaining load-interchange-generationto maintain the  |
|                        | balance <u>between loads and resources in real time</u> within <u>aits</u> Balancing   |
|                        | Authority Area and supporting Interconnection by keeping its actual interchange equal to its scheduled interchange and meeting its           |
|                        | frequency in real time. bias obligation". The Balancing Authority does   |
|                        | not possess the bulk power system information necessary to manage  |
|                        | Transmission flows. Therefore, the Balancing Authority can only plan   |
|                        | to meet SOLs and IROLs by responding to directions from the  |
|                        | Transmission Operator, including scheduling and operating resources  |
| R11 - Existing         | within the limits prescribed by the Transmission Operator.   |
| KII - EXISUII <u>g</u> | <u>The Transmission Operator shall perform seasonal, next-day, and</u><br><u>current-day Bulk Electric System studies to determine SOLs.</u> |
|                        | Neighboring Transmission Operators shall utilize identical SOLs for  |
|                        | common facilities. The Transmission Operator shall update these Bulk   |
|                        | Electric System studies as necessary to reflect current system   |
|                        | conditions; and shall make the results of Bulk Electric System studies   |
|                        | available to the Transmission Operators, Balancing Authorities (subject  |
| R11 -                  | <u>confidentiality requirements), and to its Reliability Coordinator.</u><br>Deleted:  |
| Resolution             | First sentence – First sentence – SOLs are determined through the FAC-   |
| Resolution             | 011-2 and FAC-014-2 processes so this sentence is no longer required.  |
|                        |  |
|                        | Second sentence - proposed TOP-003-2 requires the transfer of any  |
|                        | and all data required for Real-time operations or Operational Planning   |
|                        | Analyses regardless of the timeframe involved. Operational Planning<br>Analyses are covered in proposed TOP-002-3, Requirement R1.           |
|                        | Second sentence deleted as this is now covered in the proposed IRO-009-1,  |
|                        | Requirement R5 for IROLs and the SDT has moved toward an operating   |
|                        | philosophy for the Transmission Operator based on avoiding IROLs (and selected SOLs) and acting within the IROL Tyr                          |
|                        | Third sentence – 'update as necessary' is ambiguous and the SDT  |
|                        | believes that proposed TOP-003-2, Requirement R1 better covers this for  |
|                        | studies and covered in proposed TOP-002-3, Requirement R3 for distribution,  |
|                        | so this is redundant and can be deleted.   |
| <u>R12 - Existing</u>  | The Transmission Service Provider shall include known SOLs or<br>IROLs within its area and neighboring areas in the determination of         |
|                        | transfer capabilities, in accordance with filed tariffs and/or regional  |
|                        | Total Transfer Capability and Available Transfer Capability calculation  |
|                        | processes.   |
| R12_                   | Deleted as duplicative of proposed MOD-028-2, and MOD-029-2, or  |
| Resolution             | MOD-030-2  |
| <u>R13 - Existing</u>  | At the request of the Balancing Authority or Transmission Operator, a  |
|                        | Generator Operator shall perform generating real and reactive  |
|                        | capability verification that shall include, among other variables,   |

| ·                            |   |

|  |
| auditRequirement R11.  |
| TOP-005-2  |
| R1 - Existing Each Transmission Operator and Balancing Authority shall provide its   |
| Reliability Coordinator with the operating data that the Reliability   |
|  |
| Coordinator requires to perform operational reliability assessments and  |
| to coordinate reliable operations within the Reliability Coordinator   |
| Area. 1.1 - Each Reliability Coordinator shall identify the data   |
| requirements from the list in Attachment 1-TOP-005-0 "Electric   |
| System Reliability Data" and any additional operating information  |
| requirements relating to operation of the bulk power system within the   |
| Reliability Coordinator Area.  |
| R1 -   |
| ResolutionDeleted – covered by proposed TOP-003-2. The SDT does not believe  |
| it is necessary to develop a minimum list of the data required. Such   |
| minimum lists could stifle creativity and innovations as they assume   |
|  |
| that data needs don't change. For example, such a list now could not   |
| include phasor measurement data, as use of the data is still being   |
| explored and is not consistent across industry. However, phasor  |
| measurement data might obviate the need for other data in the  |

|                              | minimum set. The effect is that resources would still be required to be<br>utilized to gather and maintain the data that is outdated and no longer<br>relevant. These resources would be better used supporting gathering<br>the new data such as phasor measurement data.  |
|------------------------------|---|
|                              | Furthermore, the NERC certification process provides certainty that the<br>Transmission Operators are capable of identifying the necessary data to<br>comply with the standards. Developing a minimum data set provides<br>no more certainty that Transmission Operators will comply with the<br>standards than having the capability determined in the certification<br>process. |
| <u>R2 - Existing</u>         | As a condition of receiving data from the Interregional Security<br>Network (ISN), each ISN data recipient shall sign the NERC<br>Confidentiality Agreement for "Electric System Reliability Data."   |
| <del>R1</del> R2 -           |   |
| Resolution                   | Confidentiality is not a reliability issue but a market or business issue.<br>Since this is not a reliability issue, it does not belong in the Reliability<br>Standards and can be deleted.   |
| R3 - Existing                | Upon request, each Balancing Authority and Transmission Operator  |
|                              | shall provide to other Balancing Authorities and Transmission   |
|                              | Operators with immediate responsibility for operational reliability, the  |
|                              | operating data that are necessary to allow these Balancing Authorities  |
|                              | and Transmission Operators to perform operational reliability   |
|                              | assessments and to coordinate reliable operations. Balancing  |
|                              | Authorities and Transmission Operators shall provide the types of data  |
|                              |   |
|                              | as listed in Attachment 1-TOP-005-0 "Electric System Reliability  |
|                              | Data," unless otherwise agreed to by the Balancing Authorities and  |
|                              | Transmission Operators with immediate responsibility for operational  |
|                              | <u>reliability.</u>   |
| R2 <u>R3 -</u><br>Resolution | Deleted – covered by as redundant with proposed TOP-003-2.  |
| <u>R4 - Existing</u>         | Each Purchasing-Selling Entity shall provide information as requested   |
|                              | by its Host Balancing Authorities and Transmission Operators to   |
|                              | enable them to conduct operational reliability assessments and  |
|                              | coordinate reliable operations.   |
| <del>R3</del> R4 -           | Deleted as redundant to NAESB standard –All operating data that a   |
| Resolution                   | Purchasing Selling Entity has that a Transmission Operator or   |
|                              | Balancing Authority needs is part of eTag and is acquired through that  |
|                              |   |
|                              | system. This is a NAESB standard and can thus be deleted.   |
|                              | Purchasing Selling Entity is covered under the INT standards and thus can be  |
|                              | deleted.  |
|                              | TOP-006-2   |
| <u>R1 - Existing</u>         | Each Transmission Operator and Balancing Authority shall know the   |
|                              | status of all generation and transmission resources available for use.  |
|                              | <u>1.1 - Each Generator Operator shall inform its Host Balancing</u>  |
|                              | Authority and the Transmission Operator of all generation resources   |
|                              | available for use. 1.2 - Each Transmission Operator and Balancing   |
|                              | Authority shall inform the Reliability Coordinator and other affected   |
|                              | Balancing Authorities and Transmission Operators of all generation  |
|                              | and transmission resources available for use.   |

| <u>R3 - Existing</u> | The Transmission Operator shall disconnect the affected facility if the  |  |
|----------------------|--|--|
|                      | overload on a transmission facility or abnormal voltage or reactive  |  |
|                      | condition persists and equipment is endangered. In doing so, the   |  |
|                      | Transmission Operator shall notify its Reliability Coordinator and all   |  |
|                      | neighboring Transmission Operators impacted by the disconnection   |  |
|                      | prior to switching, if time permits, otherwise, immediately thereafter.  |  |
| R3 <u>-</u>          | Delete first sentence – Placing this procedure in a requirement when it  |  |
| Resolution           | is only one of the possible options for alleviating the condition is bad   |  |
|                      | practice and should not be mandated in standardsIf the situation   |  |
|                      | involves an IROL it is covered in proposed TOP-001-2, Requirements R7  |  |
|                      | through R10. If it is not an IROL, then the owner still has the right to protect their equipment within the limitations of their contracts and obligation to |  |
|                      | comply with the Reliability Standards.   |  |
|                      | Delete second sentence as duplicative of proposed TOP-001-2,   |  |
|                      | Requirements R4 & R5.  |  |
|                      | The SDT feels The SDT reaffirms that a standard should not be  |  |
|                      | mandating disconnection. This is in conflict with other Reliability  |  |
|                      | Standards where disconnection is dependent on System conditions and  |  |
|                      | coordination with other functional entities. Such actions, taken   |  |
|                      | unilaterally, could make conditions worse.   |  |
|                      |  |  |
|                      | <u>Delete second sentence – no longer needed as first sentence was</u>   |  |
|                      | deleted.   |  |
| <u>R4 - Exisitng</u> | The Transmission Operator shall have sufficient information and  |  |
|                      | analysis tools to determine the cause(s) of SOL violations. This   |  |
|                      | analysis shall be conducted in all operating timeframes. The   |  |
|                      | Transmission Operator shall use the results of these analyses to   |  |
| R4 -                 | immediately mitigate the SOL violation.Deleted – information is covered as part of the new data specification  |  |
| Resolution           | requirements in proposed TOP-003-2. Analysis tools are covered in the  |  |
| Kesolution           | certification process for initial core capabilities. The Transmission  |  |
|                      | Operator will be in violation of other standards if they don't maintain  |  |
|                      | their initial certification. For example, they can't develop their limits  |  |
|                      | without maintaining their tools. Operational Planning Analyses are   |  |
|                      | required in proposed TOP-002-3 while real-time analysis is required for  |  |
|                      | IROL mitigation in proposed TOP-001-2 thus covering the operational  |  |
|                      | timeframes. Proposed TOP-001-2, <u>R10R11</u> covers mitigation of limit   |  |
|                      | violations with the note that the SDT has moved toward an operating  |  |
|                      | philosophy based on avoiding IROLs (and selected SOLs) and the IROL $T_{v}$ .  |  |
| PER-001-0            |  |  |
| <u>R1 - Existing</u> | Each Transmission Operator and Balancing Authority shall provide   |  |
|                      | operating personnel with the responsibility and authority to implement   |  |
|                      | real-time actions to ensure the stable and reliable operation of the Bulk  |  |
|                      | Electric System.   |  |
| R1 -                 | Deleted - In FERC Order 693a, paragraph 112, the Commission  |  |
| Resolution           | clarifies that a Reliability Coordinator's authority to issue directives   |  |
|                      | arises out of the Commission's approval of Reliability Standards that  |  |
|                      | mandate compliance with such directives. The SDT believes  |  |
|                      | thatreasonably applied this same logic-applies to Transmission   |  |
|                      | Operators and Balancing Authorities and that makes this requirement  |  |
|                      | superfluous and thus it can be deleted.  |  |
| L                    | superfueus and mus it can be defeted.  |  |
