Interpretation of IRO-010-1 for the WECC Reliability Coordination Subcommittee (Project 2009-11)

Since at least one negative ballot was submitted with a comment, a recirculation ballot will be held. The recirculation ballot will be held after the drafting team responds to voter comments submitted during this ballot.

The initial ballot for an interpretation of IRO-010-1 — Reliability Coordinator Data Specification and Collection, Requirements R1.2 and R3, for the Western Electricity Coordinating Council (WECC) Reliability Coordination Subcommittee ended May 1, 2009. The ballot results are shown below. The Ballot Results Web page provides a link to the detailed results.

    Quorum: 88.64%
    Approval: 84.77%

Ballot Criteria

Approval requires both:

- A quorum, which is established by at least 75% of the members of the ballot pool for submitting either an affirmative vote, a negative vote, or an abstention; and

- A two-thirds majority of the weighted segment votes cast must be affirmative. The number of votes cast is the sum of affirmative and negative votes, excluding abstentions and nonresponses.

Project Background

The WECC Reliability Coordination Subcommittee is seeking clarification on 1) the type of data to be supplied to the Reliability Coordinator, 2) which entities are ultimately responsible for ensuring data are provided, and 3) what actions are expected of the Reliability Coordinator regarding a "mutually acceptable format." The request and interpretation can be found on the project page:

Standards Development Process

The Reliability Standards Development Procedure contains all the procedures governing the standards development process. The success of the NERC standards development process depends on stakeholder participation. We extend our thanks to all those who participate.
