

Standards Announcement Project 2006-06 Reliability Coordination

Successive, Recirculation and Non-Binding Poll Results

[Now Available](#)

A successive ballot for **COM-001-2 – Communications** and a non-binding poll of the associated VRF/VSLs and recirculation ballots for **COM-002-3 – Communication and Coordination** and **IRO-001-3 – Reliability Coordination – Responsibilities and Authorities** and non-binding polls for the associated VRF/VSLs concluded on Friday, July 6, 2012.

Voting statistics for each ballot are listed below, and the [Ballots Results](#) page provides a link to the detailed results.

Standard	Approval	Non-binding Poll Results
COM-001-2 (Successive)	Quorum: 75.37% Approval: 72.16%	Quorum: 75.37% Supportive Opinions: 73.71%
COM-002-3 (Recirculation)	Quorum: 85.34% Approval: 81.71%	Quorum: 84.16% Supportive Opinions: 79.16%
IRO-001-3 (Recirculation)	Quorum: 85.04% Approval: 81.72%	Quorum: 83.87 % Supportive Opinions: 86.91%

Next Steps

The drafting team is considering all comments submitted for COM-001-2, and based on the comments will determine whether to make additional changes. If the drafting team determines that no substantive changes to the standard are required, the team will submit the standard and associated documents for a recirculation ballot. If the drafting team makes substantive changes to the standard, the team will submit its consideration of comments, along with the revised standard and associated documents, for a quality review prior to posting for another successive ballot.

COM-002-3 – Communication and Coordination and IRO-001-3 – Reliability Coordination – Responsibilities and Authorities will be presented to the NERC Board of Trustees for adoption and subsequently filed with regulatory authorities. The VRFs and VSLs for both standards (unchanged from

those included in the versions of the standards posted for recirculation ballot) will be presented to the board for approval.

Background

The Reliability Coordination Standards Drafting Team was tasked with 1) ensuring that the reliability-related requirements applicable to the Reliability Coordinator are clear, measurable, unique, and enforceable; 2) ensuring that this set of requirements is sufficient to maintain reliability of the Bulk Electric System; 3) revising the group of standards based on FERC Order 693.

During the course of this project, the Reliability Coordination Standards Drafting Team incorporated changes due to the work of the IROL Standards Drafting Team. Two standards from the original Standards Authorization Request (PER-004 and PRC-001) were moved to other projects due to the scope overlap. In addition, the scope of Project 2006-06 was expanded to incorporate directives from FERC Order 693 associated with standard IRO-003-2.

Additional information is available on the [project page](#).

Standards Development Process

The [Standards Processes Manual](#) contains all the procedures governing the standards development process. The success of the NERC standards development process depends on stakeholder participation. We extend our thanks to all those who participate.
